

The KaVA (KVN and VERA Array)

Do-Young Byun (KASI)
on behalf of KaVA Collaboration

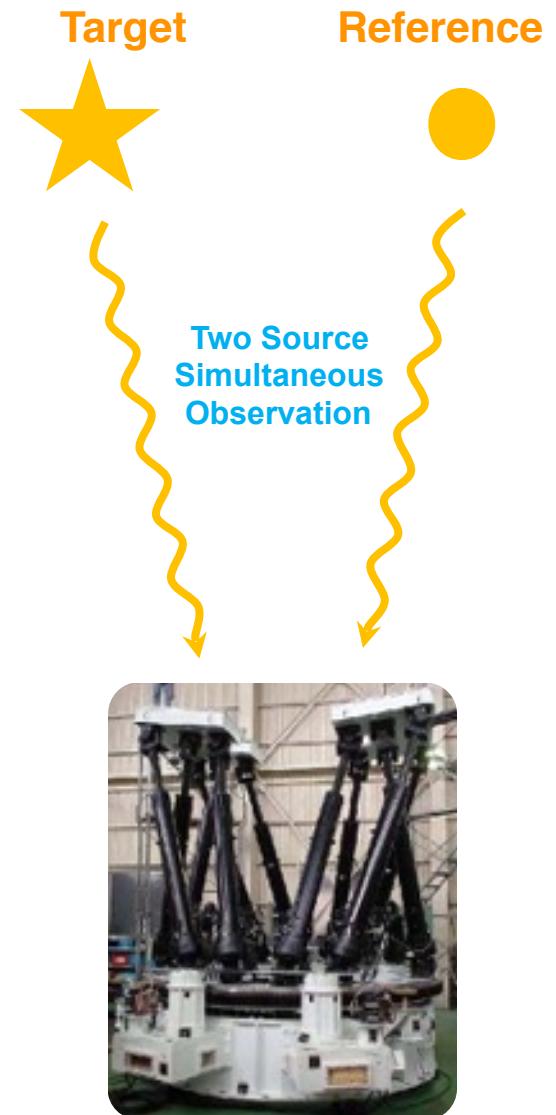

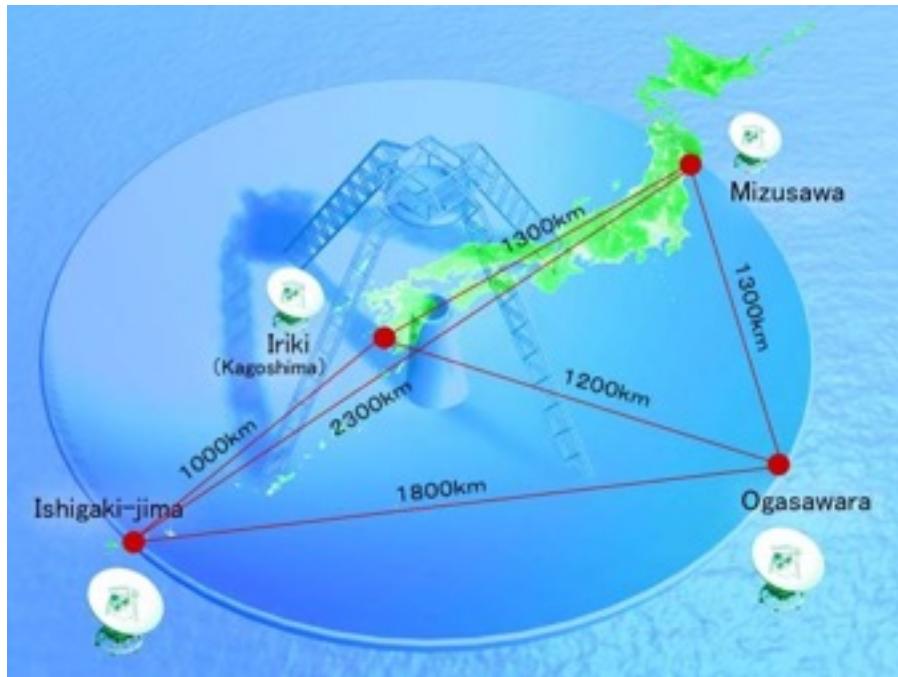

EAMA10 @ Seoul on 27 2016 Sep

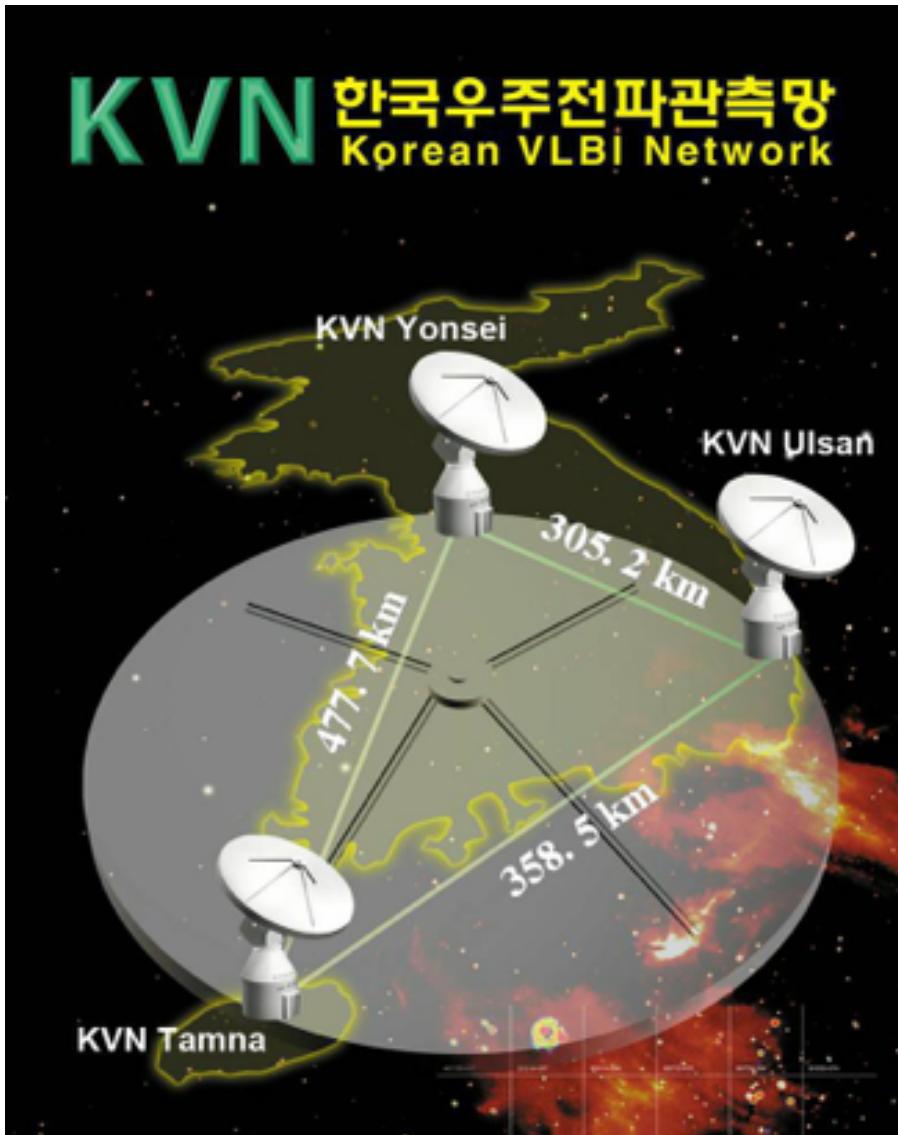

Outline

- VERA / KVN
- KaVA
- History of KaVA
- Science Activities
 - KaVA Large Programs
- Upgrade Activities

VERA: VLBI Exploration of Radio Astrometry

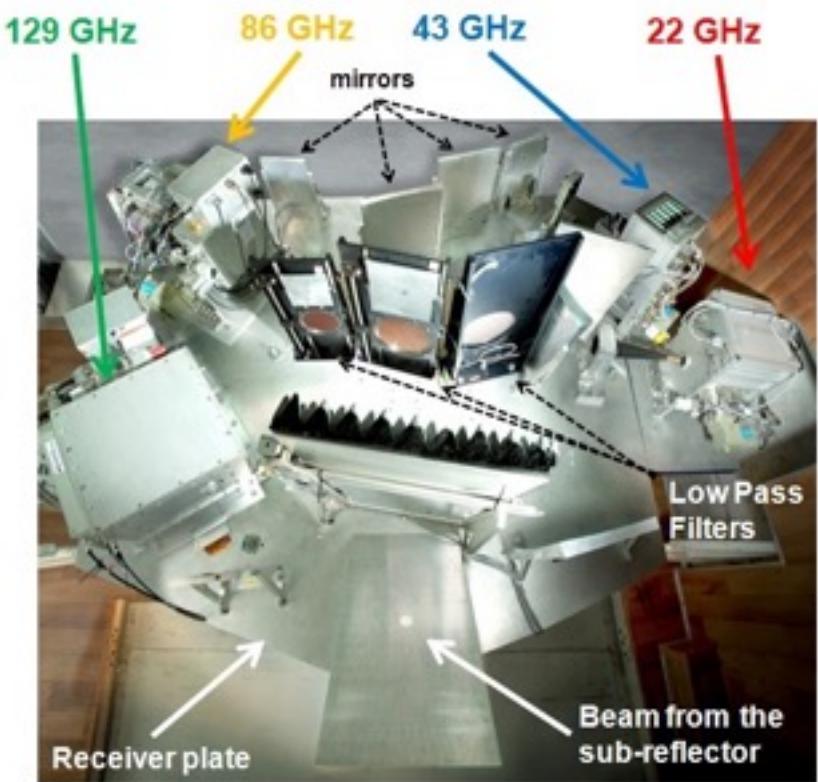

- Four 20m antennas in Japan
- Baseline : 1000- 2300 km
- Frequency : 2/8/**22/43**GHz
- Two Beam System for high precision astrometry
- Galactic 3D structure through annual parallax

- Three 21m antennas in Korea
- Baseline 300 - 500km
- Simultaneous Multi-frequency
@**22/43/86/129GHz**

→ Talk by TH Jung

KaVA : KVN and VERA Array

- 7 Telescopes ($D \sim 20m$)
- Baseline : 300 - 2300 km
- Frequency : 22/43(/86/129)GHz
- Beam Size : 1.2/0.6(/1.5/1.0) mas
- Baseline Sensitivity $\sim 10/20$ mJy

History of KaVA

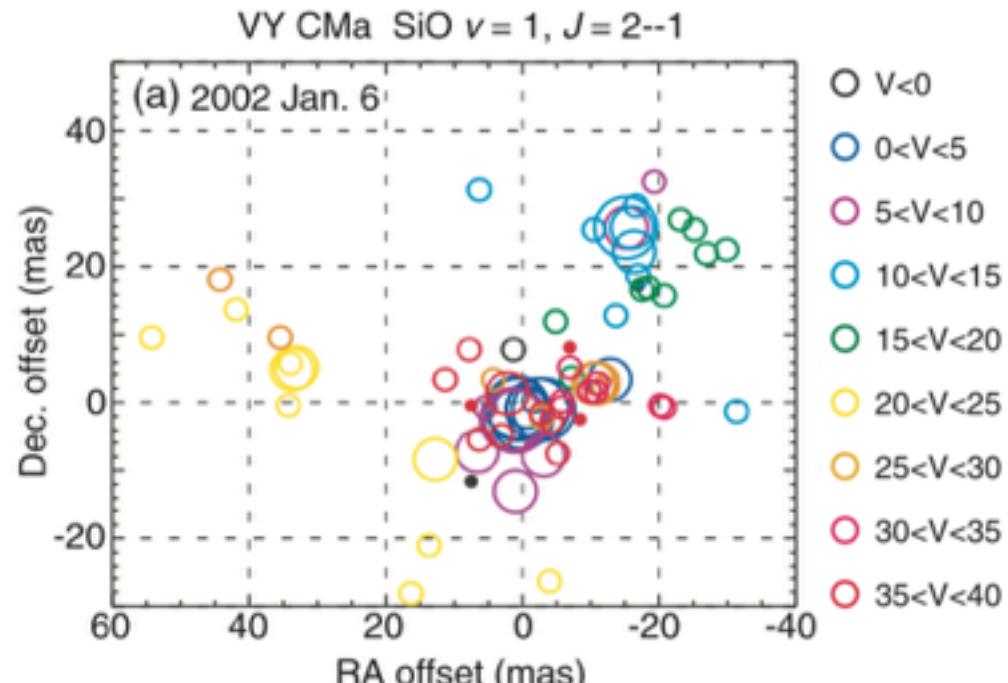

- 2001 KVN project launch

KVN Science Committee Meeting

History of KaVA

- 2001 KVN project launch
- 2002 TRAO-NRO VLBI

Shibata et al, 2004, PASJ

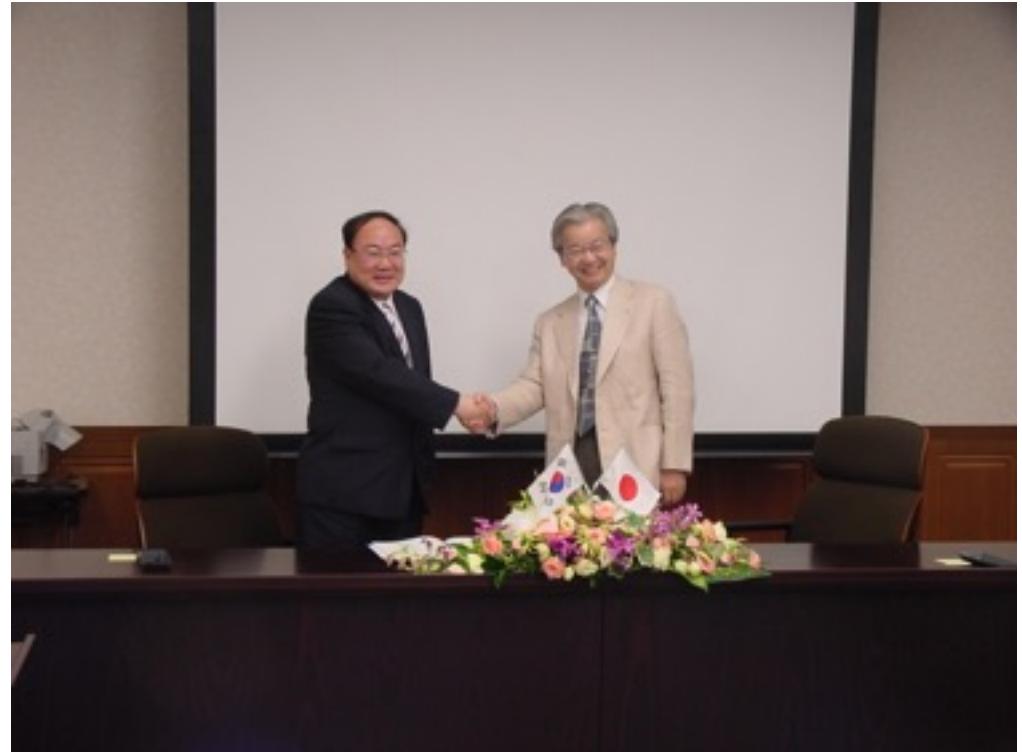

History of KaVA

- 2001 KVN project launch
- 2002 TRAO-NRO VLBI
- 2002 KASI-NAOJ VLBI MOA

History of KaVA

- 2001 KVN project launch
- 2002 TRAO-NRO VLBI
- 2002 KASI-NAOJ VLBI MOA
- 2005 K-J VLBI Correlator

Agreement on VLBI Correlator (7 July 2005)

History of KaVA

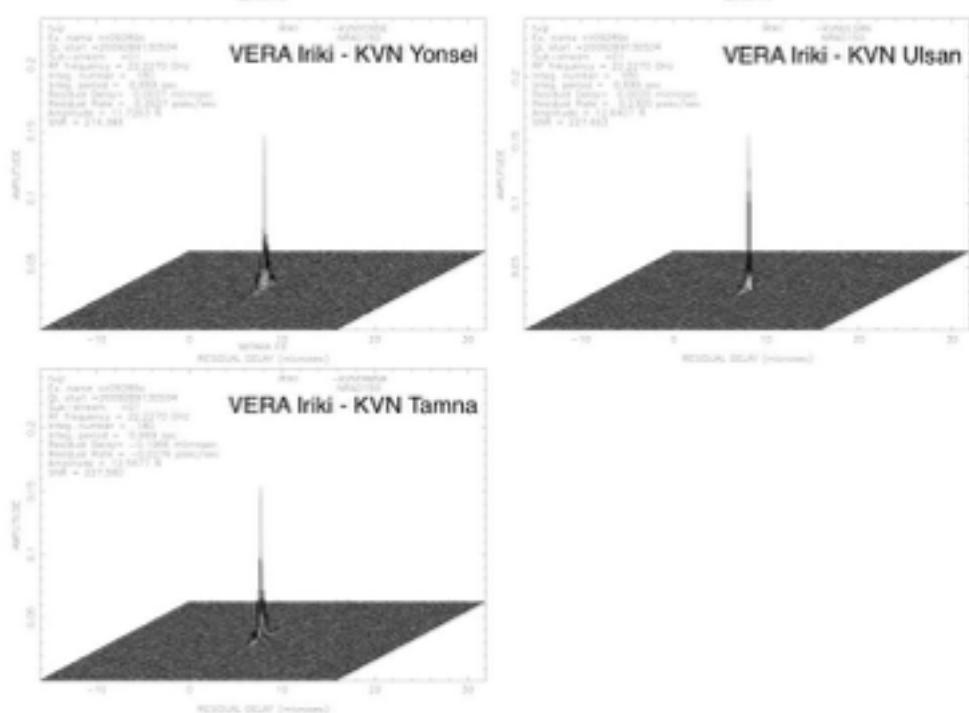

- 2001 KVN project launch
- 2002 TRAO-NRO VLBI
- 2002 KASI-NAOJ VLBI MOA
- 2005 K-J VLBI Correlator
- 2008 KVN construction

History of KaVA

- 2001 KVN project launch
 - 2002 TRAO-NRO VLBI
 - 2002 KASI-NAOJ VLBI MOA
 - 2005 K-J VLBI Correlator
 - 2008 KVN construction
 - 2009 KVN-VERA Fringe

Fringes of KVN-VERA baselines in the K-band

History of KaVA

- 2001 KVN project launch
- 2002 TRAO-NRO VLBI
- 2002 KASI-NAOJ VLBI MOA
- 2005 K-J VLBI Correlator
- 2008 KVN construction
- 2009 KVN-VERA Fringe
- 2010 KaVA Science WG

4th KVN & VERA Joint Science Working Group Meeting
29-30 Jan 2013 Seoul National University, Seoul, Korea

- AGN / SFR / Evolved Star / Galactic Astrometry
- f-f Meeting twice in a year / monthly telecon
- ~15 members/WG

History of KaVA

- 2001 KVN project launch
- 2002 TRAO-NRO VLBI
- 2002 KASI-NAOJ VLBI MOA
- 2005 K-J VLBI Correlator
- 2008 KVN construction
- 2009 KVN-VERA Fringe
- 2010 KaVA Science WG
- 2013 Daejeon Correlator

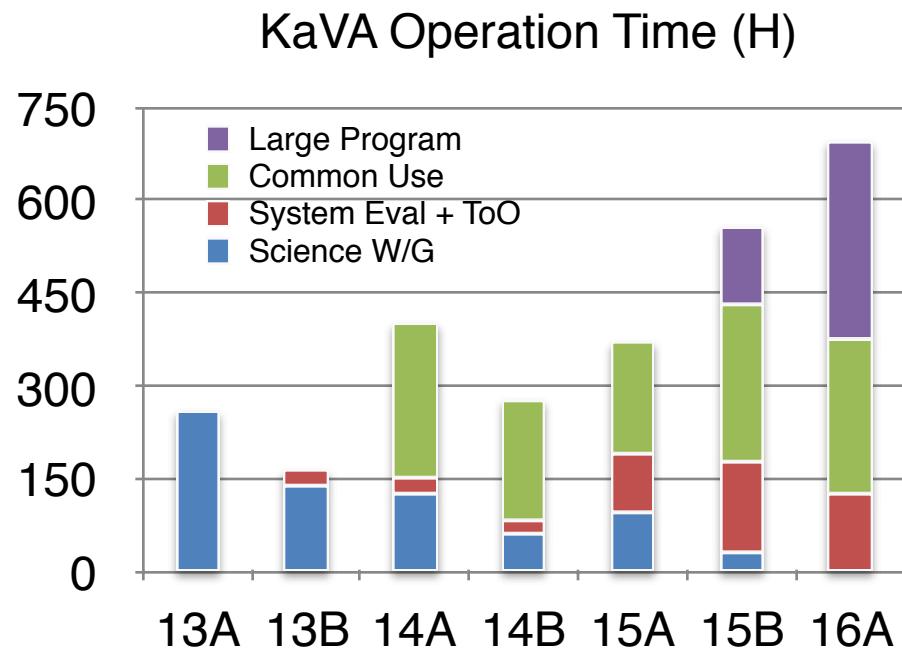

Korea-Japan Correlation Center

- Development : 2005 - 2010
- Commission : 2011 - 2012
- Full Operation : 2013
- (Max) Input : (4 x) 2Gbps x 16 stations

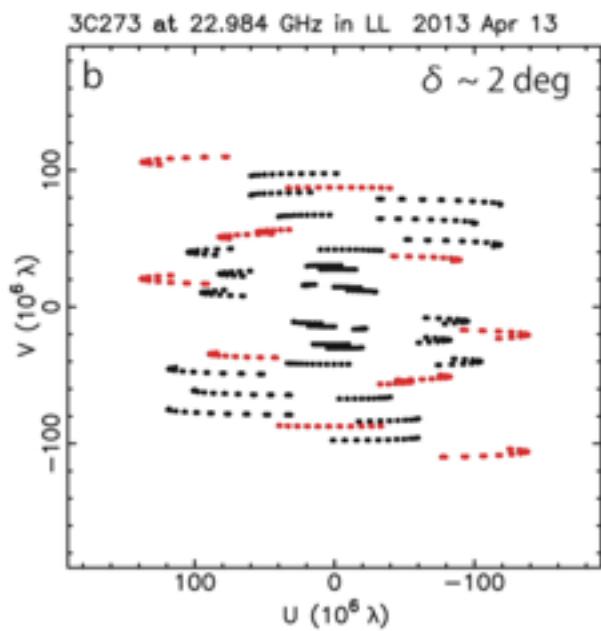

History of KaVA

- 2001 KVN project launch
- 2002 TRAO-NRO VLBI
- 2002 KASI-NAOJ VLBI MOA
- 2005 K-J VLBI Correlator
- 2008 KVN construction
- 2009 KVN-VERA Fringe
- 2010 KaVA Science WG
- 2013 Daejeon Correlator
- 2014 KaVA Common Use
- 2015 KaVA Large Programs

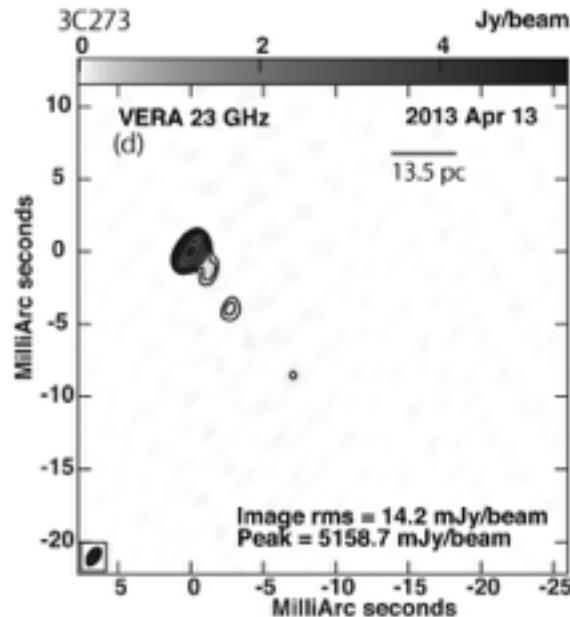

Imaging Capability of KaVA

- Images of 3C273 (Niinuma et al. 2014 PASJ)

U-V Coverage

VERA

DR ~300

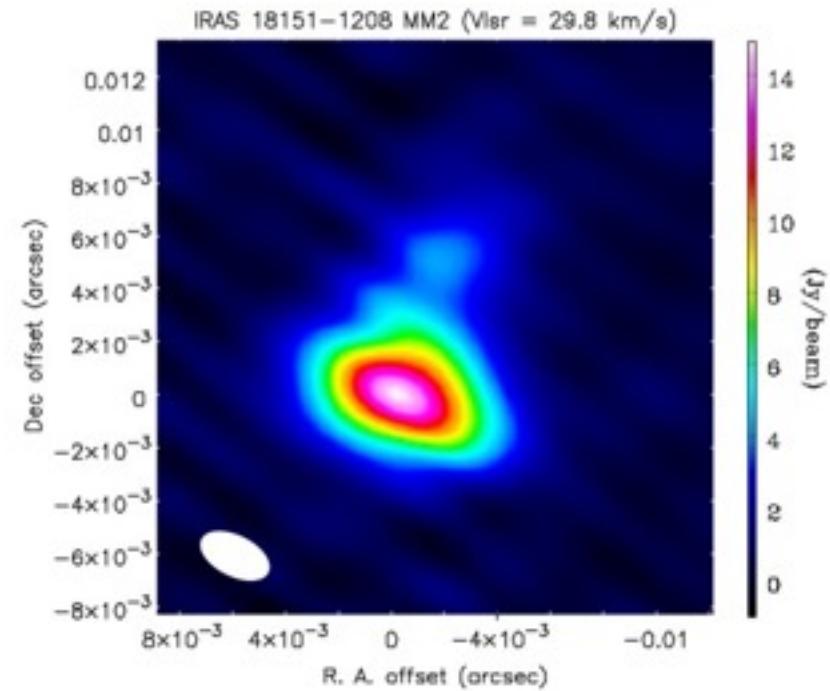

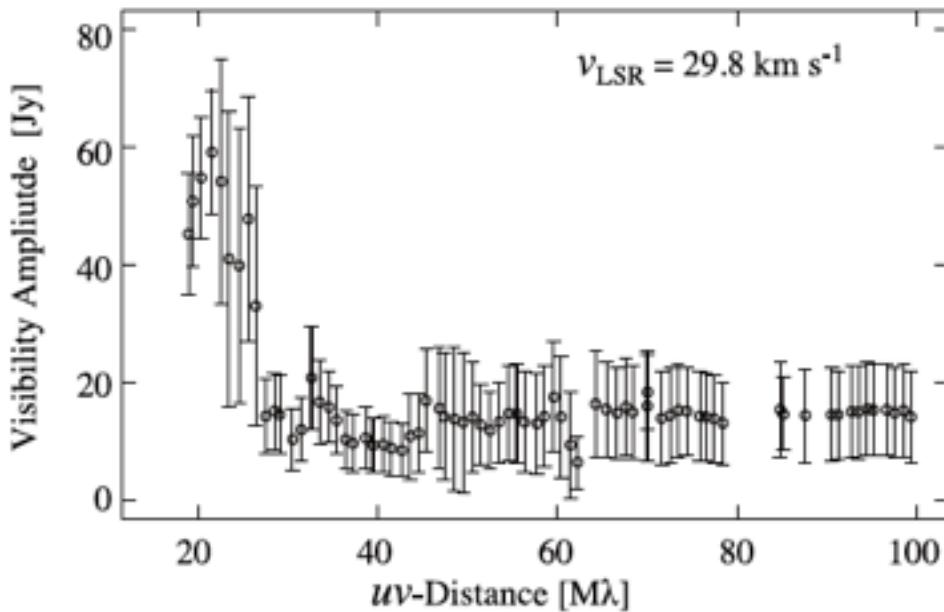

KaVA

DR ~1200

Unique Capability of KaVA

- First VLBI image of 44 GHz methanol maser (Matsumoto et al. 2014 ApJL)
 - Advantage to obtain both extended structures and compact components

Operation Mode

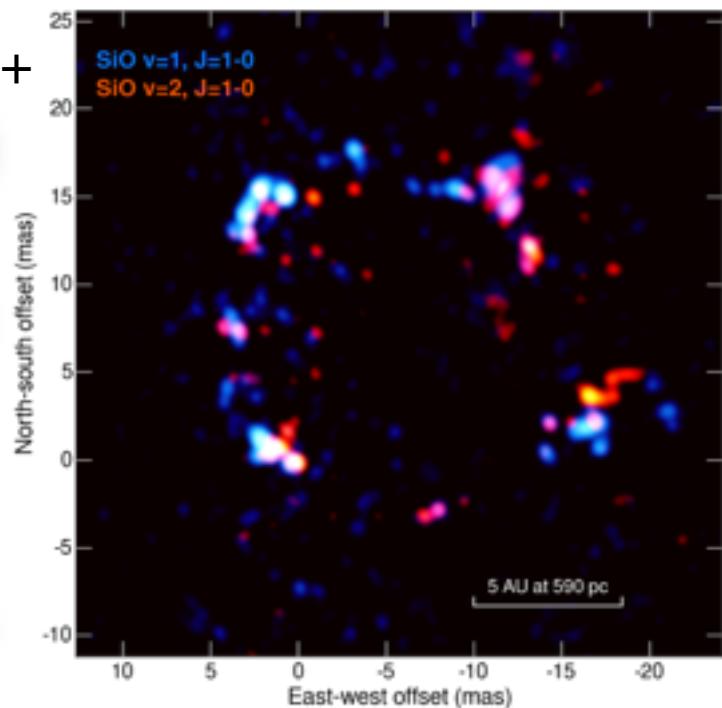

- Single-Frequency Imaging
 - 22/43GHz w/ 1Gbps recording (256GHz BW)
 - Single Polarization
- Hybrid Modes
 - KVN Multi-frequency (22/43/86/129GHz)

+

- VERA Single or Dual Beam
- VERA sub-Array
 - (e.g. IRK : 43GHz + the others : 22GHz)

Large Program : ESTEMA

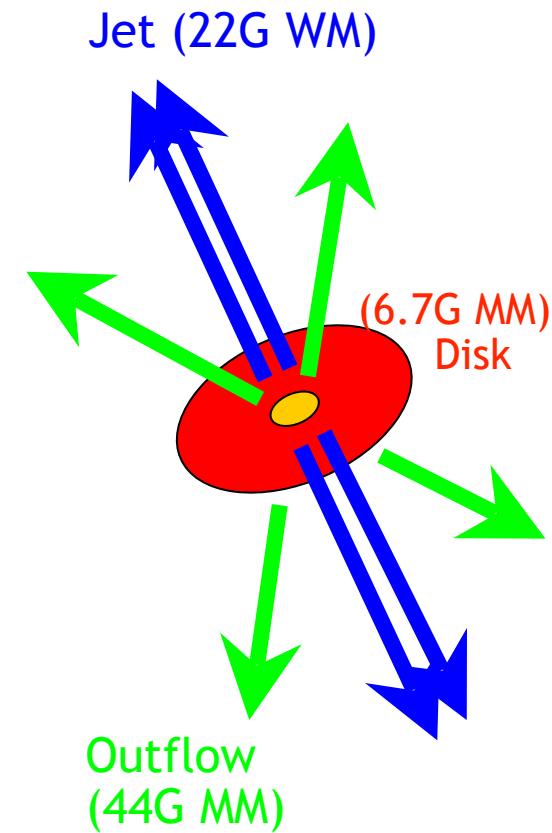

- **Expanded Study on Stellar Masers**
 - H.Imai(Kagoshima Univ.), S.-H.Cho (KASI)+
- Snapshot imaging of 80 H_2O (22GHz) and SiO (43/86/129GHz) maser sources
 - expand the number of stellar masers as VLBI targets
 - maser pumping mechanism, size distribution on ~ 0.1 AU scale
 - maser distribution on ~ 100 AU scale.
- Selection of ~ 20 targets for maser movies in Phase 2 Large Program
 - Mass loss / evolution of asymmetric structure

SiO $v=1$ and 2, $J=1-0$ maps toward WX Pcs w/ KaVA
(Yun et al. 2016 ApJ)

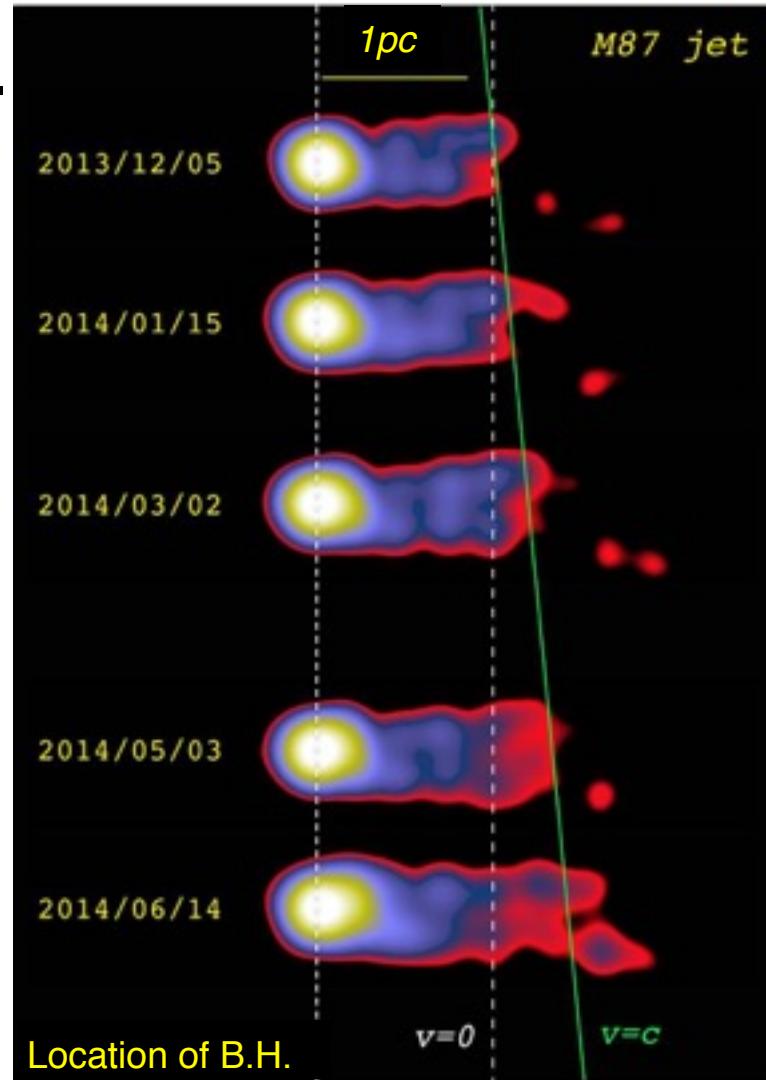

SFR Large Program

- **Understanding high-mass star formation through KaVA observations of water and methanol masers**
 - T. Hirota (NAOJ), K.-T. Kim (KASI) +
 - VLBI monitoring/survey to reveal **3D velocity and spatial structures** in 22 GHz/44 GHz masers in \sim 100 high-mass YSOs (HM-YSOs)
 - Physical and dynamical properties of **disk-outflow systems** of HM-YSOs
 - Evolution of disk-outflow systems of HM-YSOs and **maser evolutionary sequence**
 - Testing **formation scenarios** of HM-YSOs
 - Synergy with JVN 6.7GHz Methanol + ALMA

AGN Large Program

- **Exploring the vicinity of super-massive black hole with KaVA**
 - M. Kino, B. W. Sohn (KASI) +
 - **M87**: biweekly at 22/43GHz
 - Velocity field of M87 Jet
 - **SgrA***: monthly at 43GHz
 - G2 encounter
 - Gas accretion process
- > Talk by B. W. Sohn

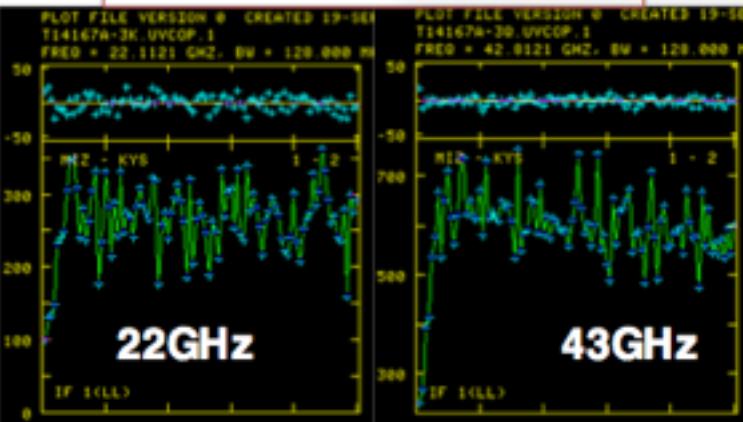

Publications w/ KaVA

1. The First VLBI Image of a 44GHz Methanol Masers with KaVA, N. Matsumoto+, 2014, ApJL (SFR)
2. VLBI observations of bright AGN jets: Evaluation of Imaging Capability, K. Niinuma+, 2014, PASJ (AGN)
3. PaGAN II: The Evolution of AGN Jets of sub-parsec Scales, J. Oh+, 2015, JKAS (AGN / Common Use)
4. Identifying High Frequency Peakers using the Korean VLBI Network , Y. Jeong +, 2016, AN (AGN / Common Use)
5. SiO Masers around WX Psc Mapped with the KVN and VERA Array, Y. Yun +, 2016, ApJ (Evolved Star)
6. VLBI observations of flared optical quasar CGRaBS J0809+5341, T. An +, 2016, PASJ (AGN / Common Use)

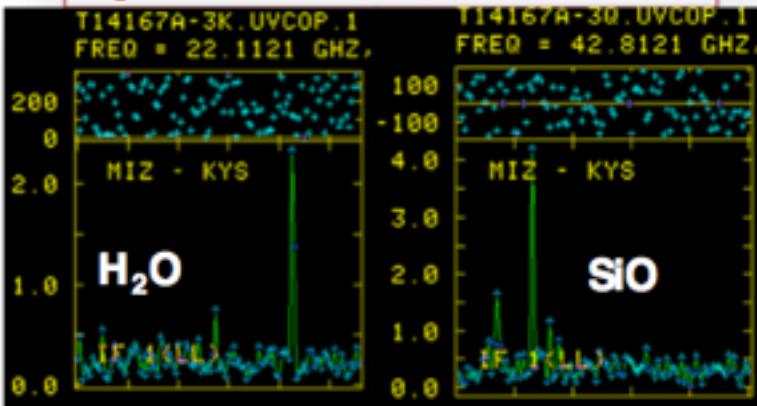

Upgrade Activities

- Phase Referencing for high precision Astrometry
- Wideband operation for high sensitivity
 - VERA : 16Gbps w/ OctaDisk2
 - KVN : 8Gbps w/ Mark6
 - KaVA : 1 Gbps → 2/4/8 Gbps
- Polarization Capability
 - KVN : Dual Polarization
 - VERA : 22GHz Dual-Pol Receivers at VERA MIZ and IRK
- Simultaneous K/Q Multi-Frequency
 - KVN + VERA Mizusawa, Iriki

K/Q simultaneous fringes of OJ287

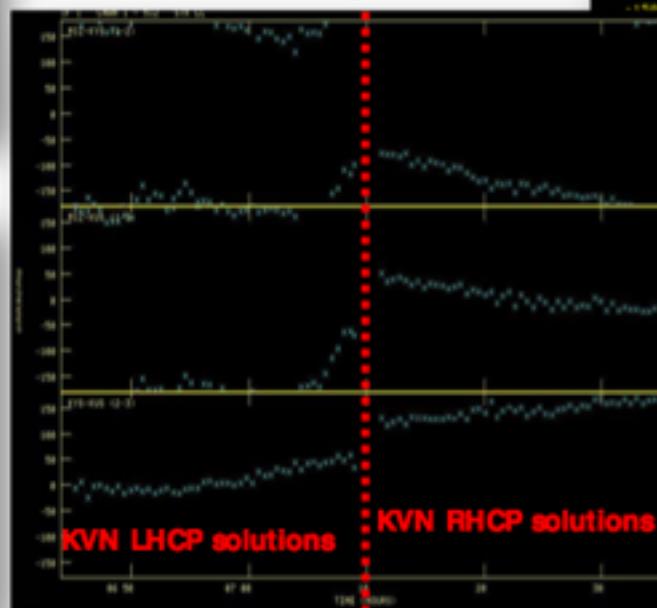

H₂O/SiO Simultaneous fringes of ORION-KL

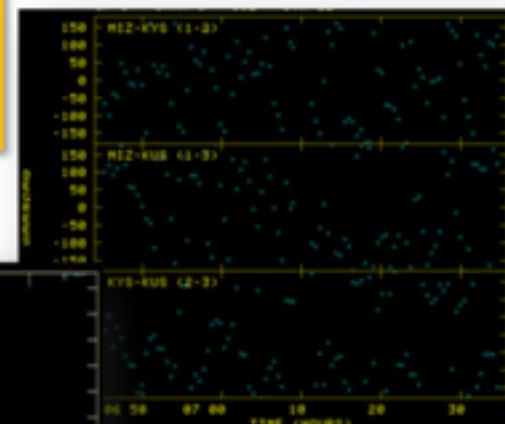

Phase Correction
with QO systems
(K→Q, OJ287)

Q-band Visibility Phase
Calibrated by K-band

Q-band Visibility Phase
No calibration applied

- K-band fringe phase solutions of OJ287 were applied to calibrate Q-band data
- Visibility phase of Q-band calibrated by K-band shows more stable phase than raw data although there are high phase rates at MIZ related baselines
→ The feasibility of K/Q simultaneous observing system has been demonstrated !!

Summary

- successful collaboration between Korea and Japan
 - imaging performance
 - steady operation / large programs
 - early science results
- continue to enhance capabilities
 - astrometry, polarization, wideband, multifrequency
- important role as a core array of EAVN
 - collaborations for EAVN and TVN

Thank you for your attention !!
