

Shocked Gas around SNRs and YSOs

**Jong-Ho Shinn
(KASI)**

2010. 10. 6

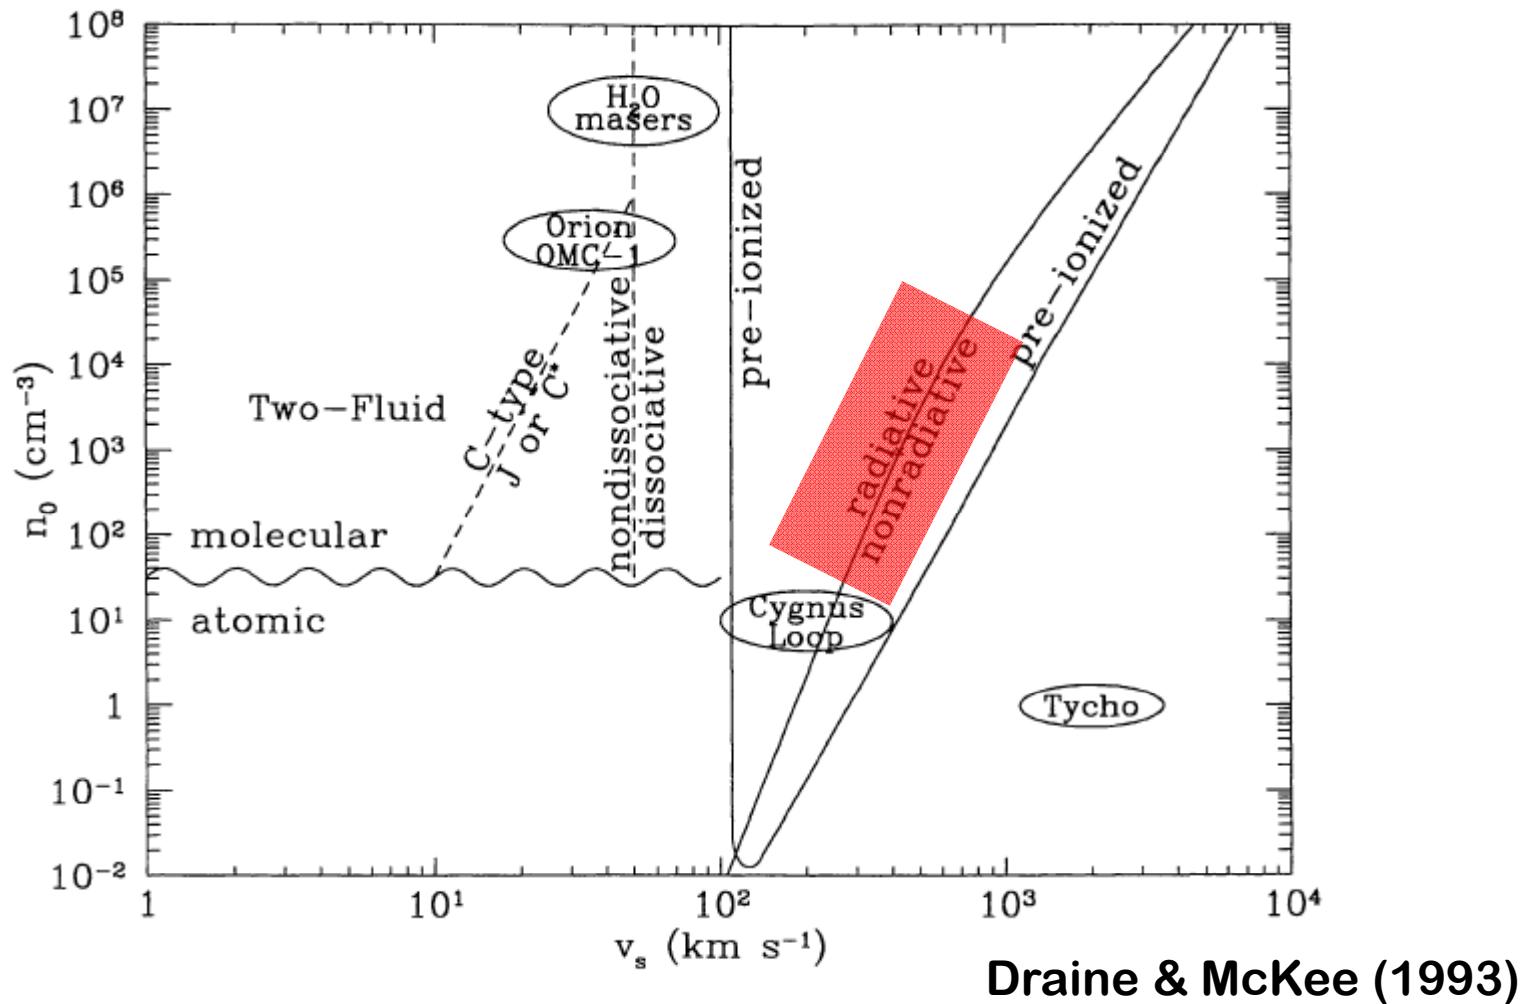

Shocks

- **Manifestation through radiations**
 - Energy flows
 - system dynamics, particle acceleration, ...
 - Medium States
 - density, temperature, element abundance, ...

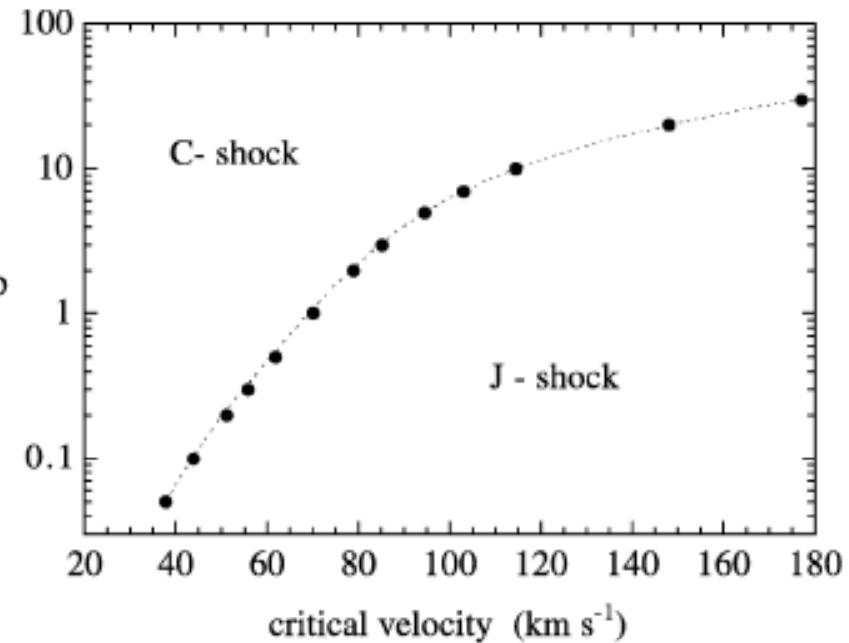

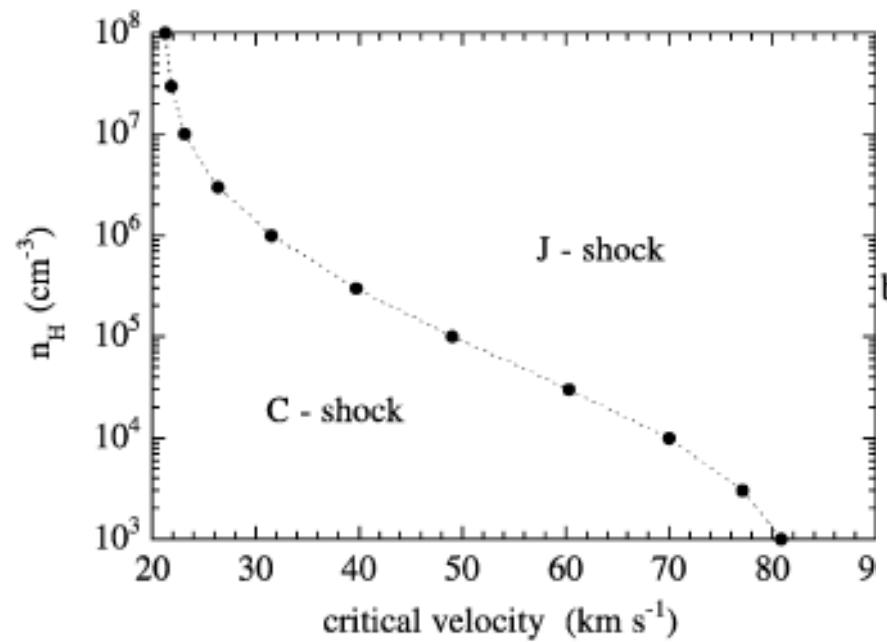

Shocks

- Non-radiative & radiative

Radiative Shocks

- J & C-type shock

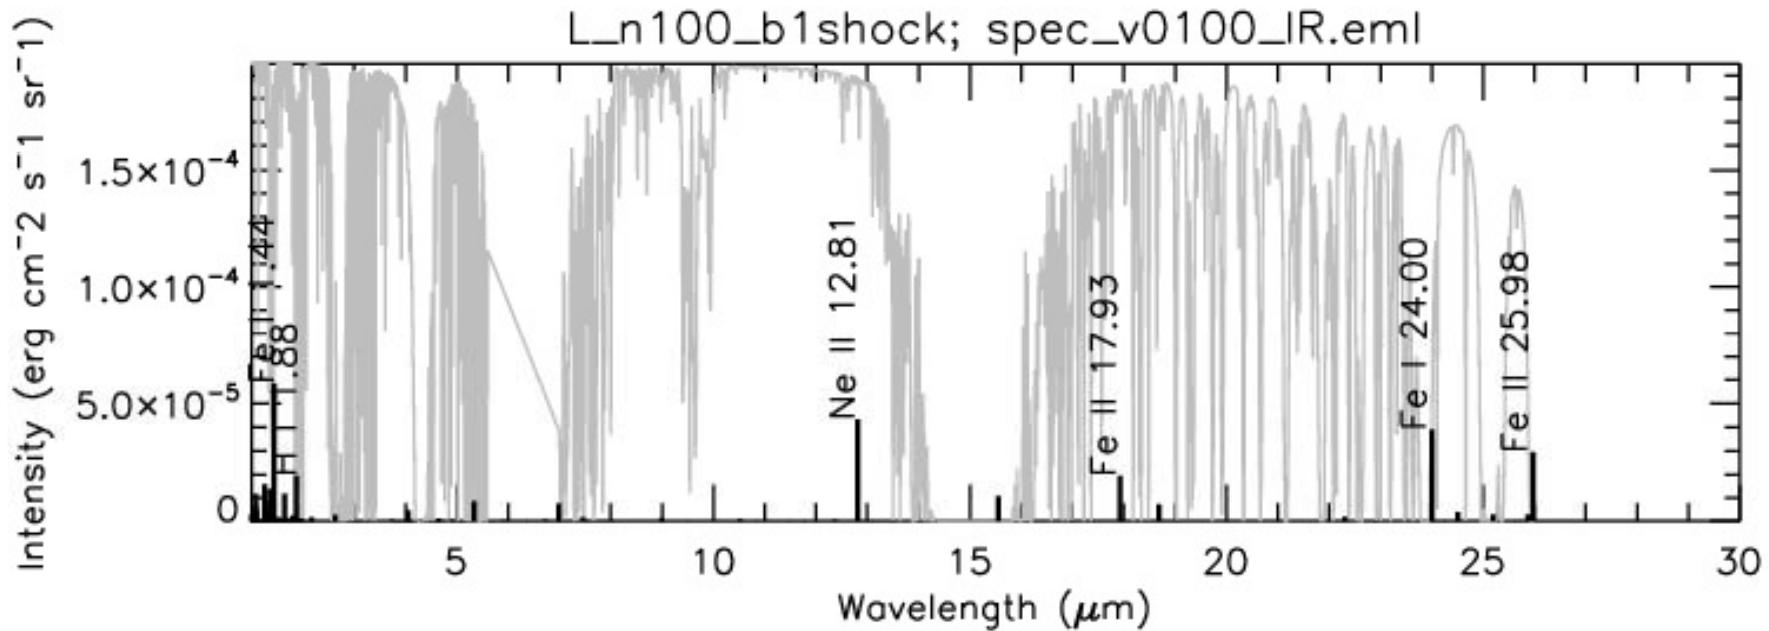

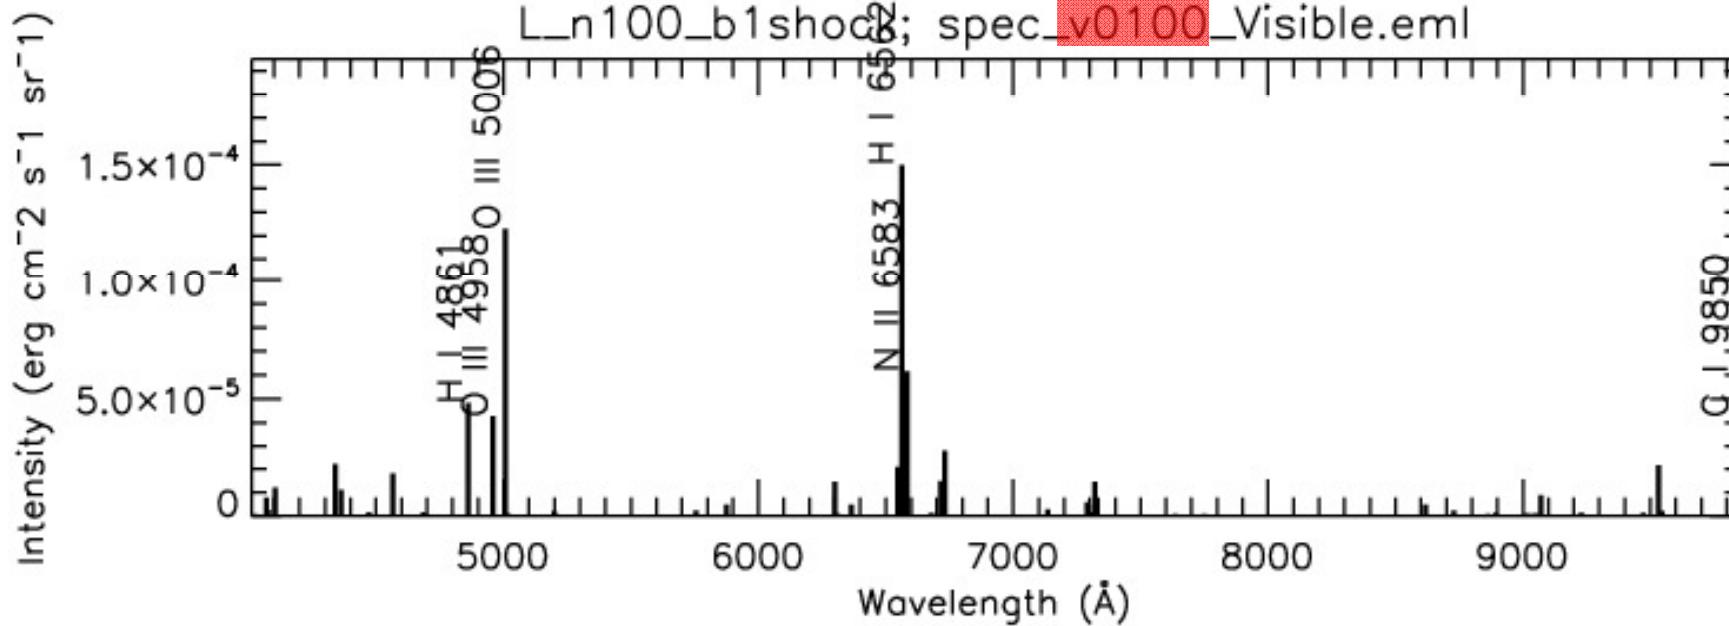

Le Bourlot et al.
(2002)

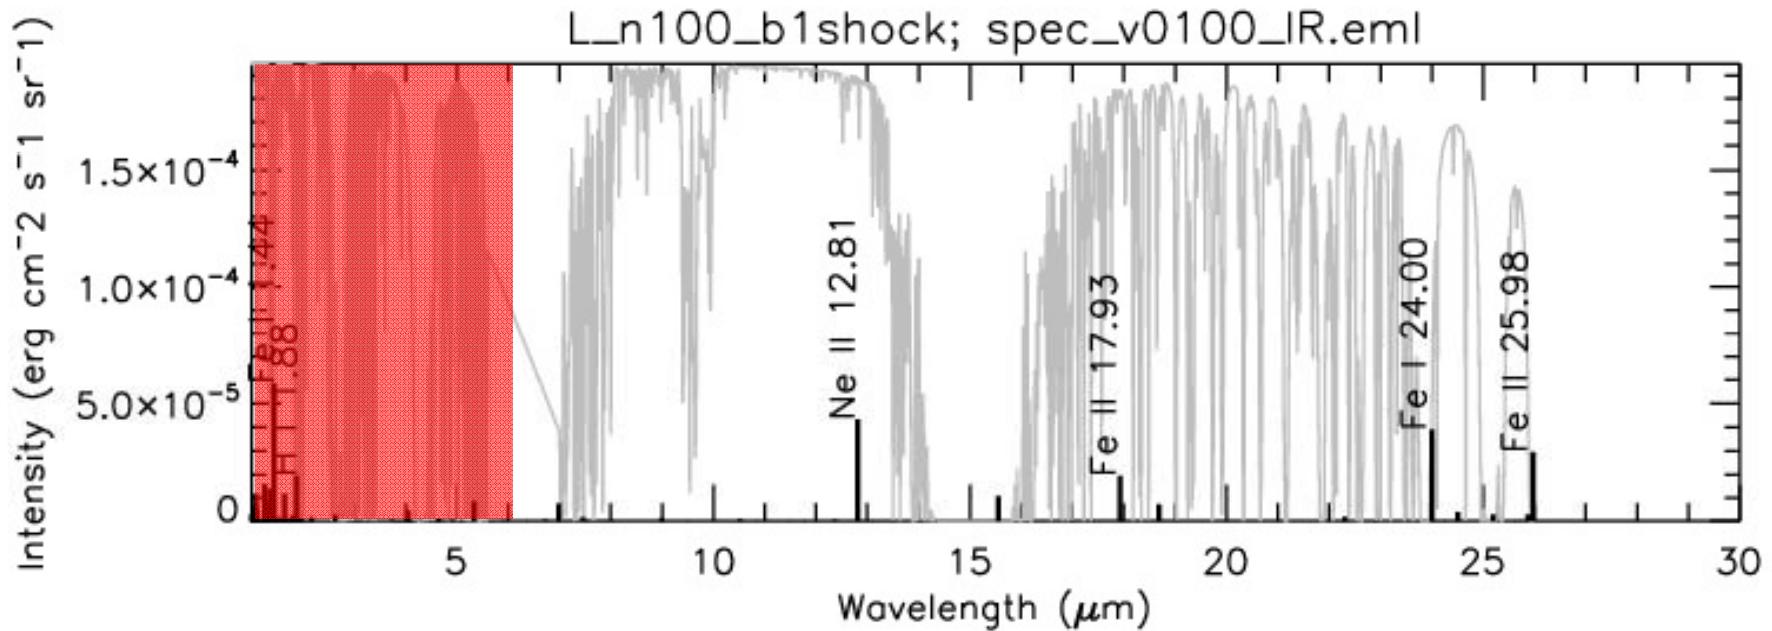

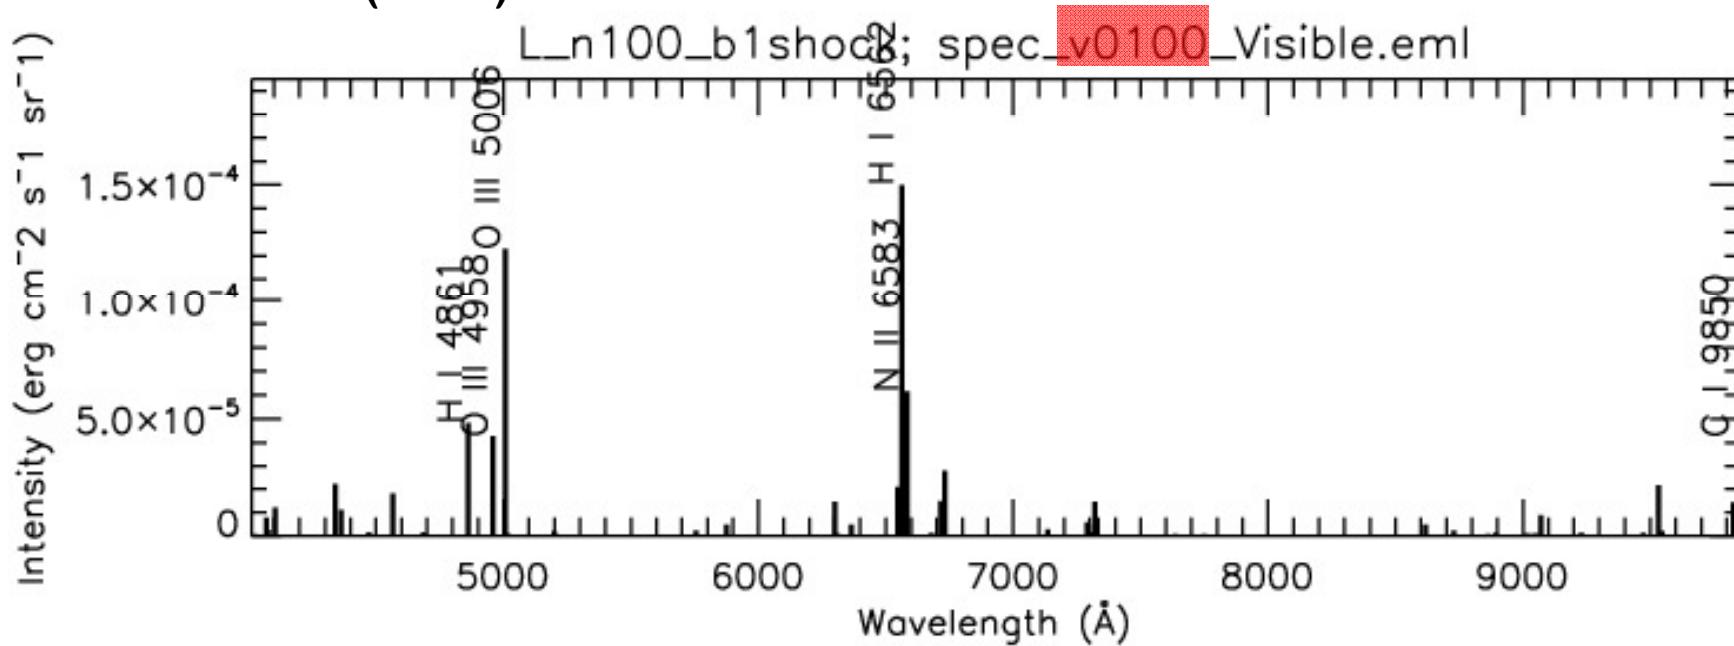

J-Shocks in GMT coverage

- Emission lines
 - Visible
 - Ionic: [N II], [O III], [S II]
 - Atomic: H-Balmer, [C I]
 - Molecular: N/A
 - Infrared
 - Ionic: [Fe II]
 - Atomic: H-Paschen, H-Brackett
 - Molecular: H₂, CO, H₂O

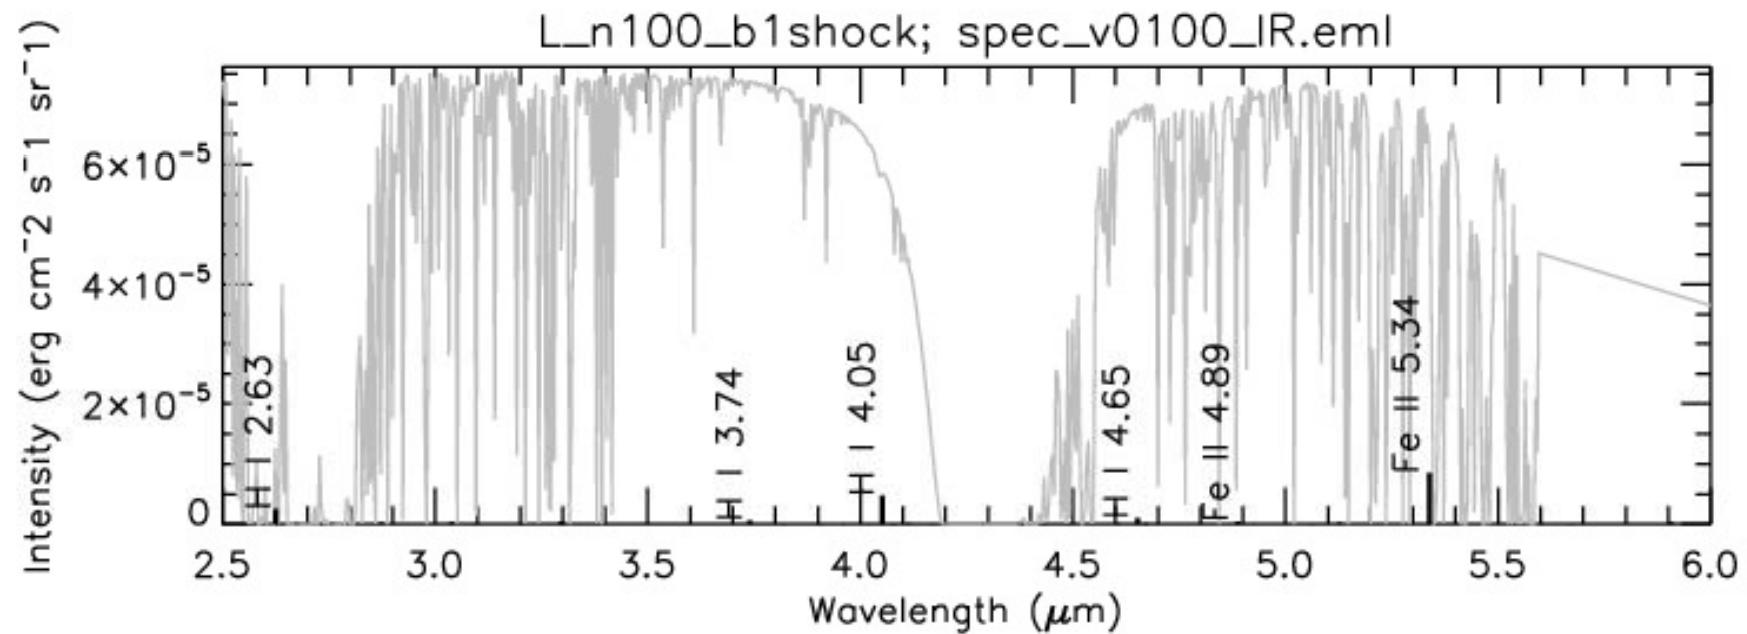

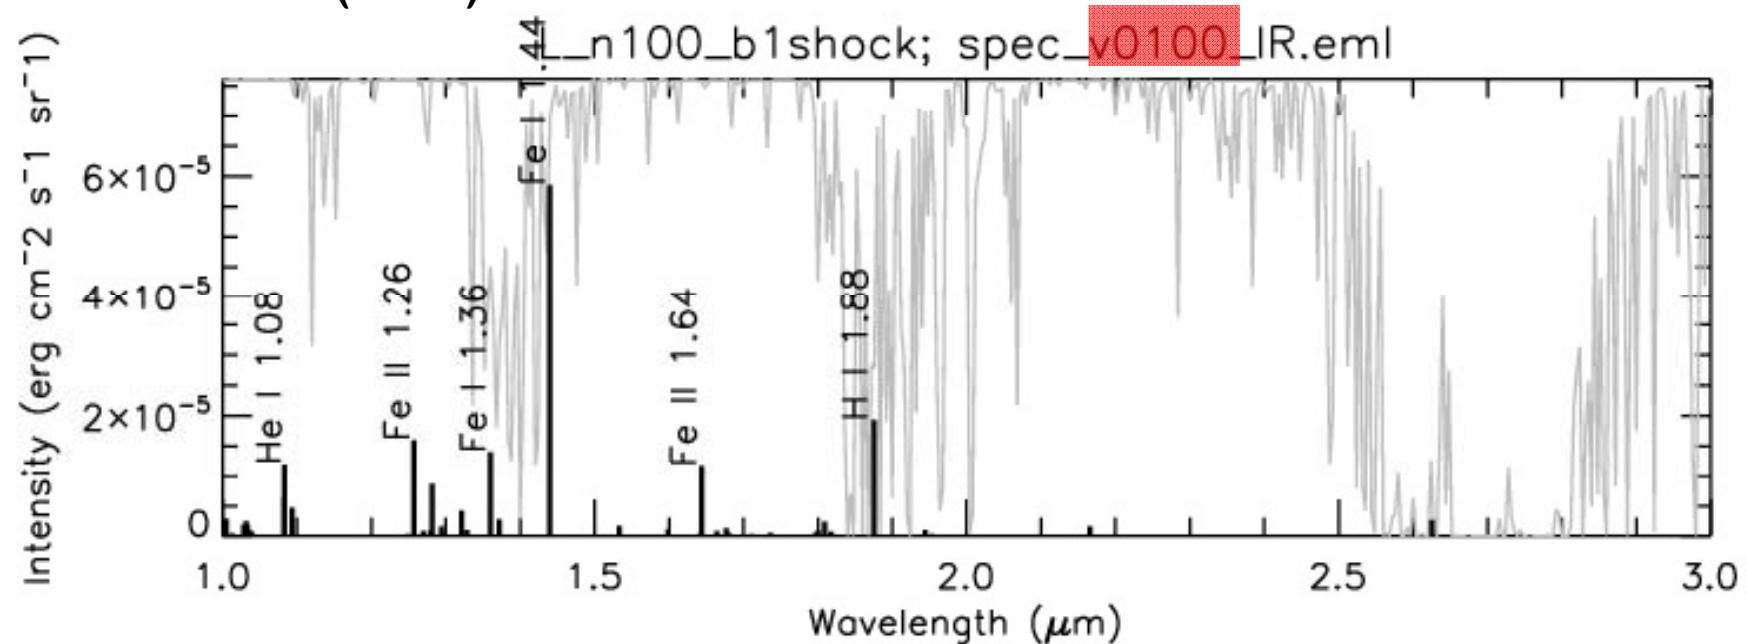

Allen et al. (2008)

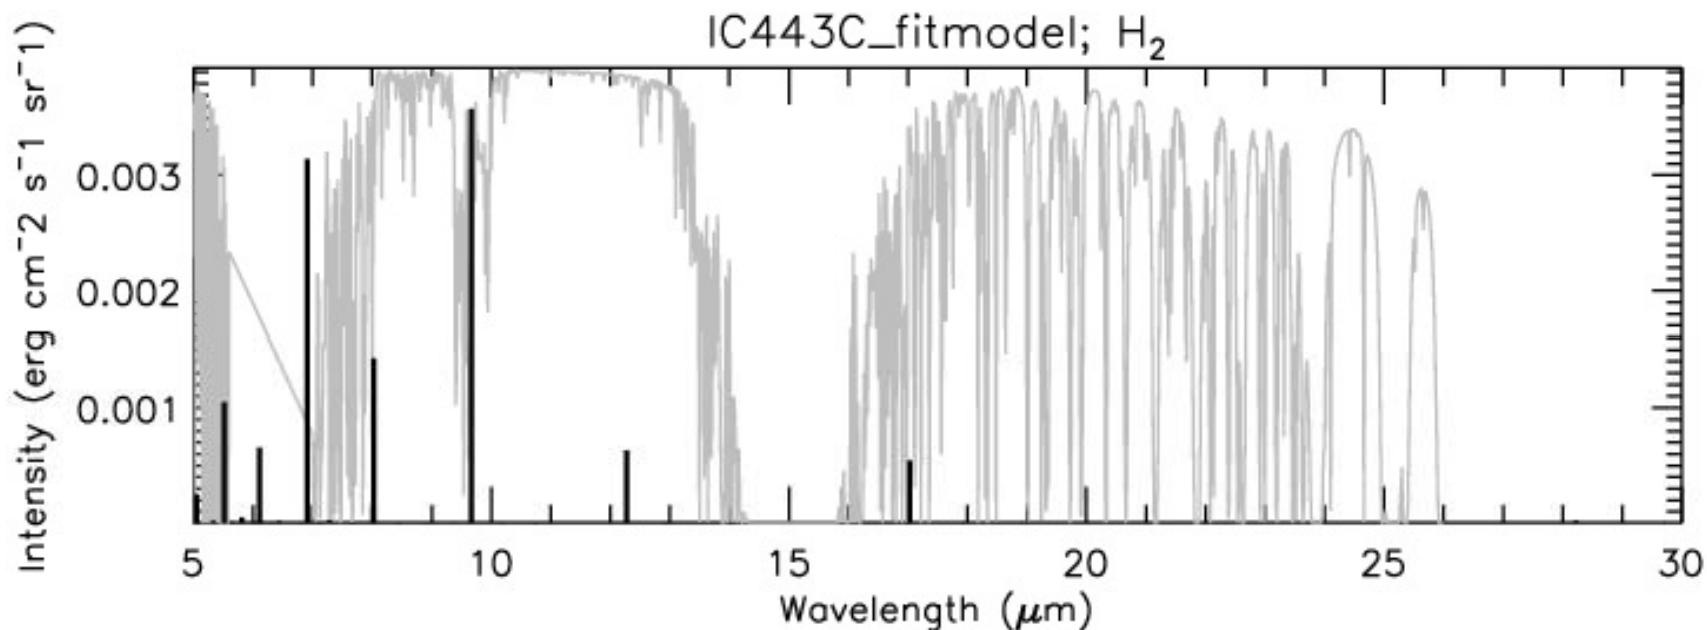

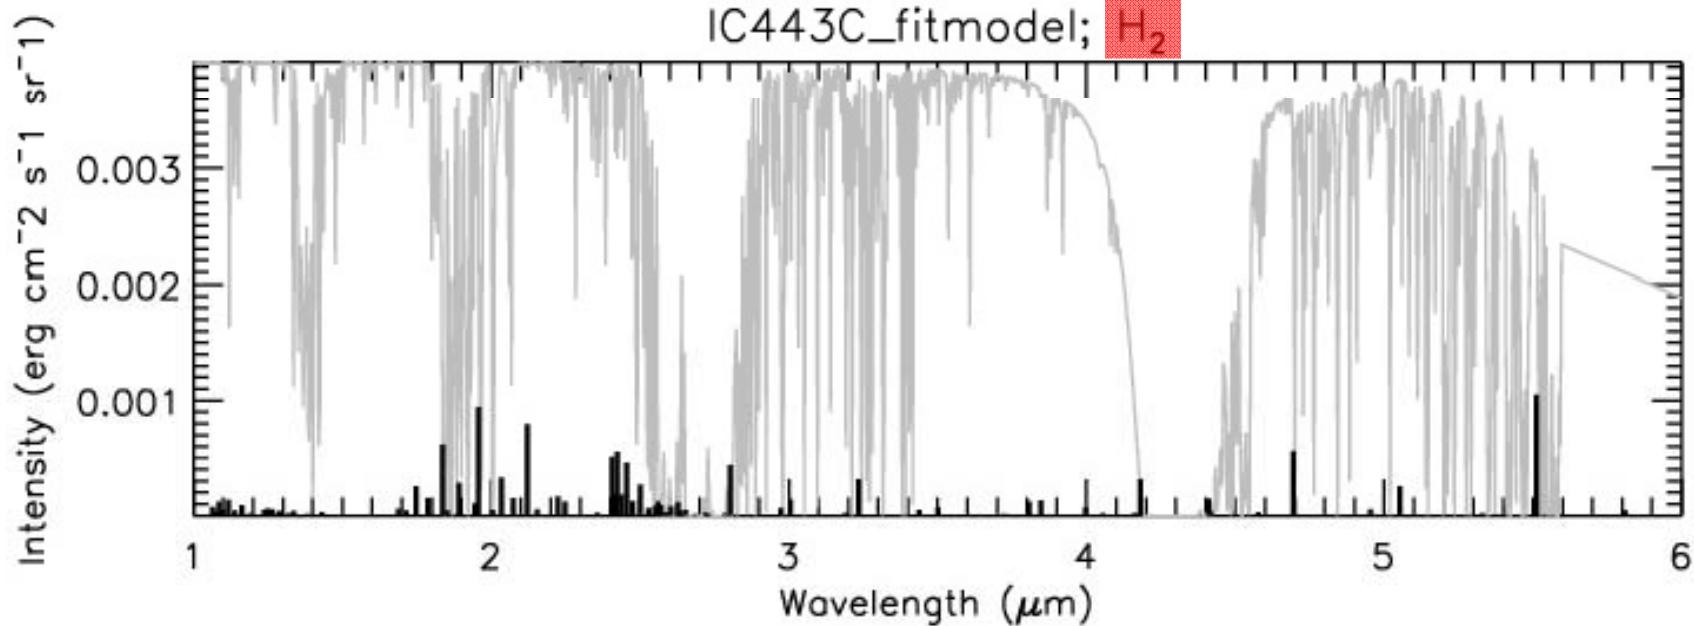

Allen et al. (2008)

Allen et al. (2008)

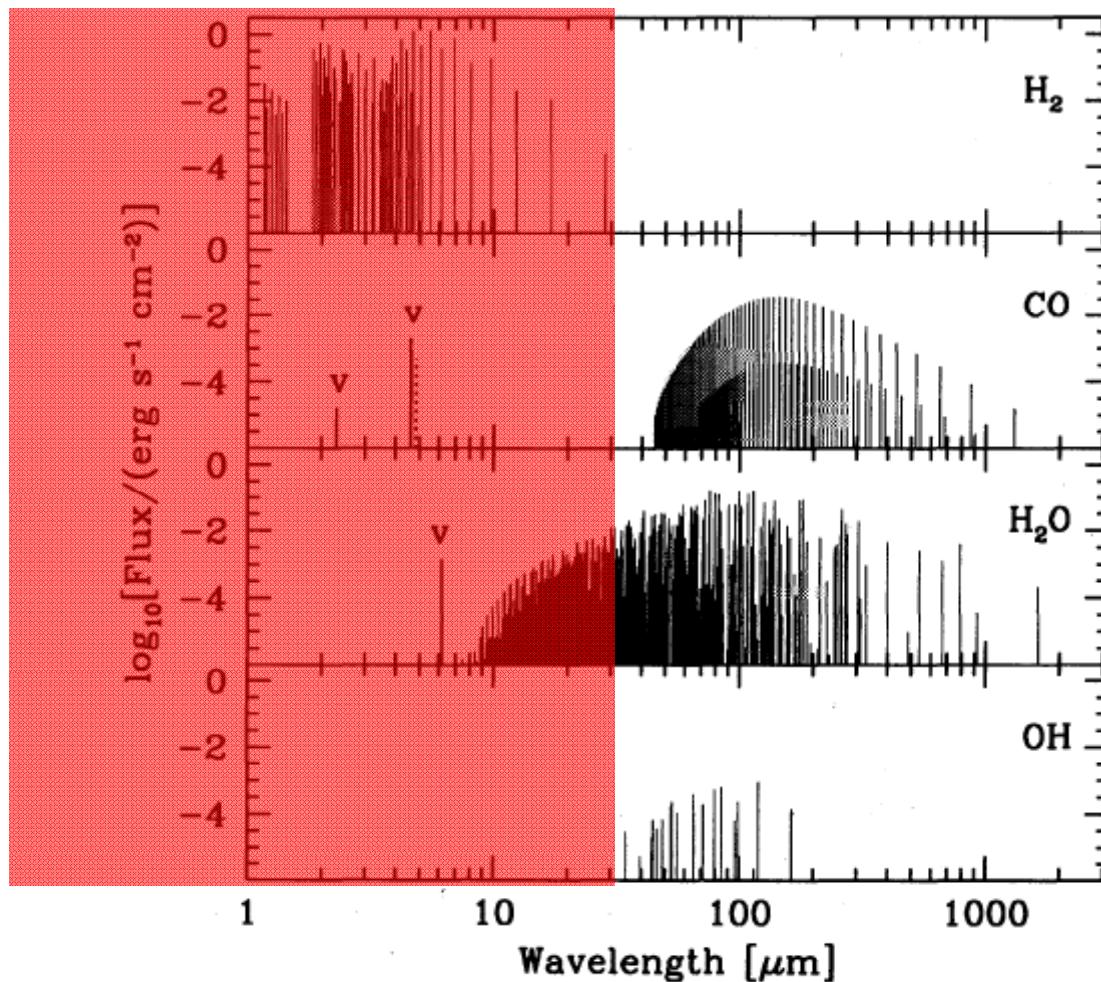

C-Shocks in GMT coverage

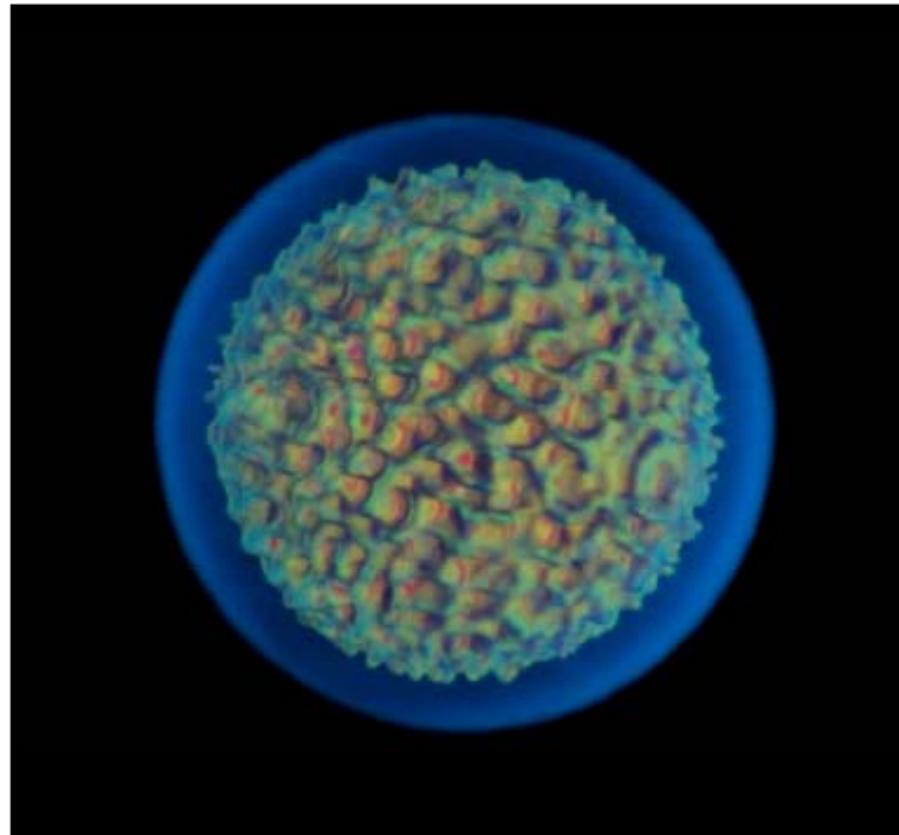

- Emission lines
 - Visible
 - Ionic: N/A
 - Atomic: N/A
 - Molecular: N/A
 - Infrared
 - Ionic: N/A
 - Atomic: N/A
 - Molecular: H₂, CO, H₂O?

C-Shocks in GMT coverage

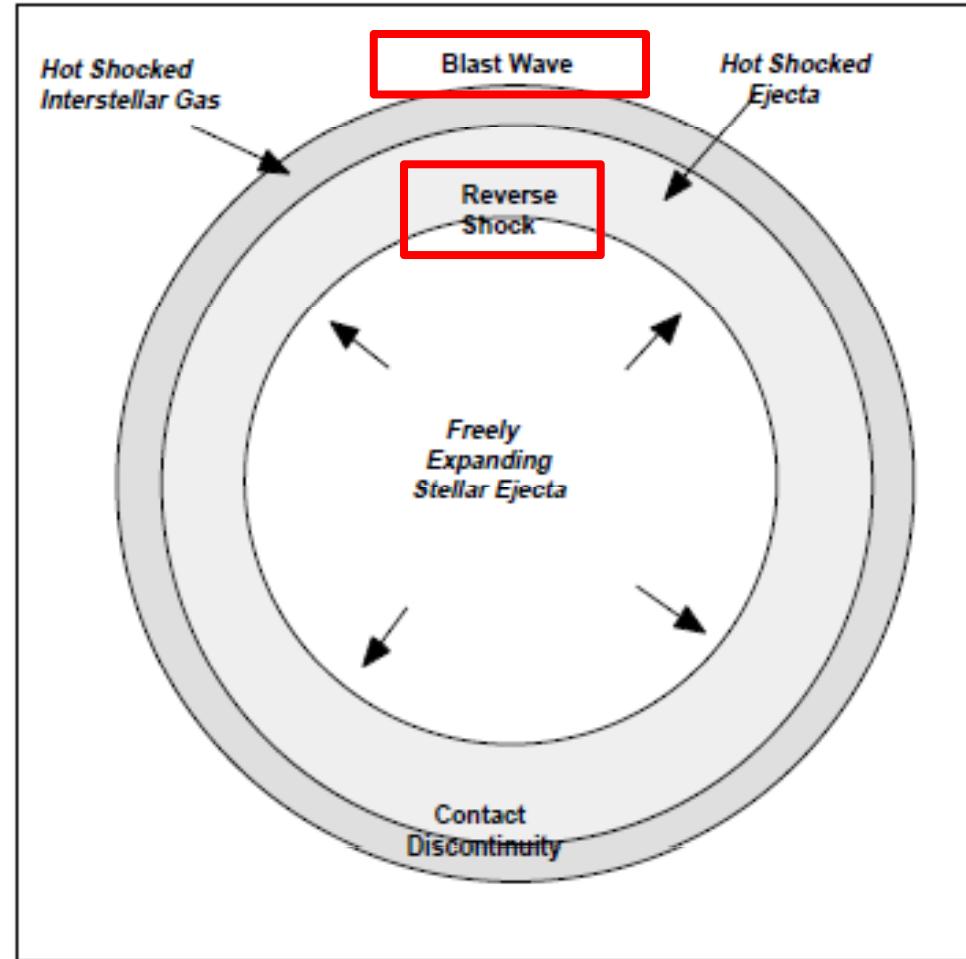

$V=40 \text{ km/s}, n=10^5 \text{ cm}^{-3}$
Kaufman & Neufeld (1996)

SNRs

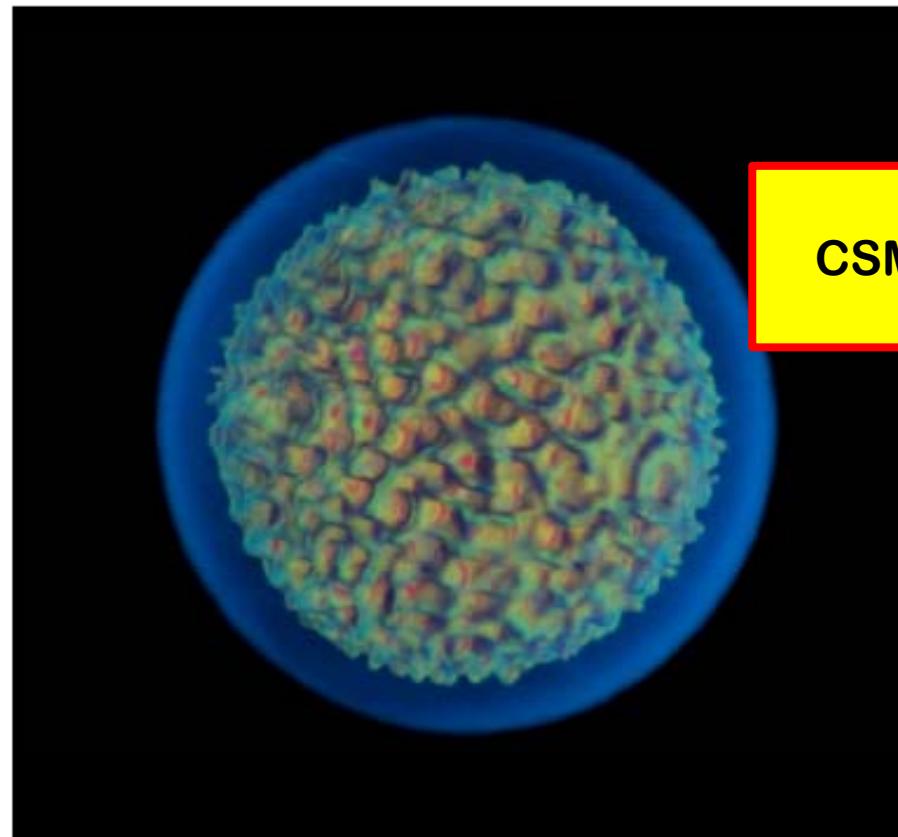

Miceli (2009)

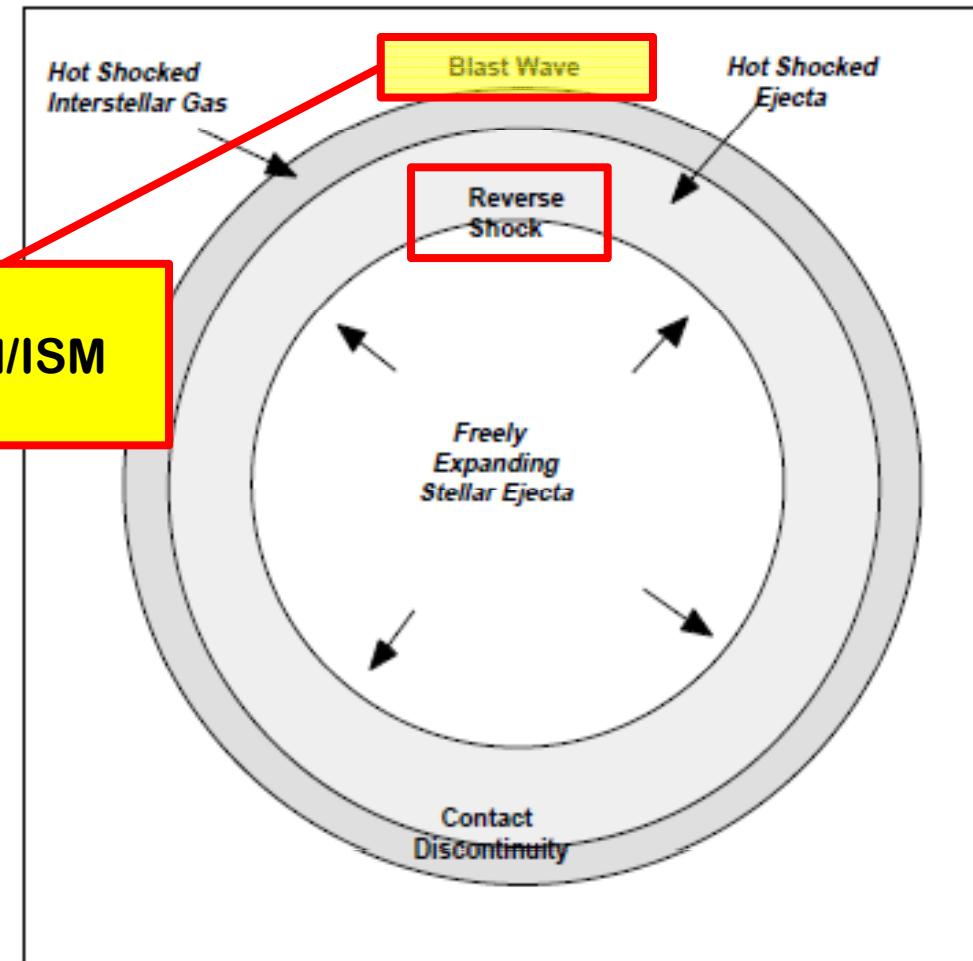

Dopita & Sutherland (2004)

SNRs

CSM/ISM

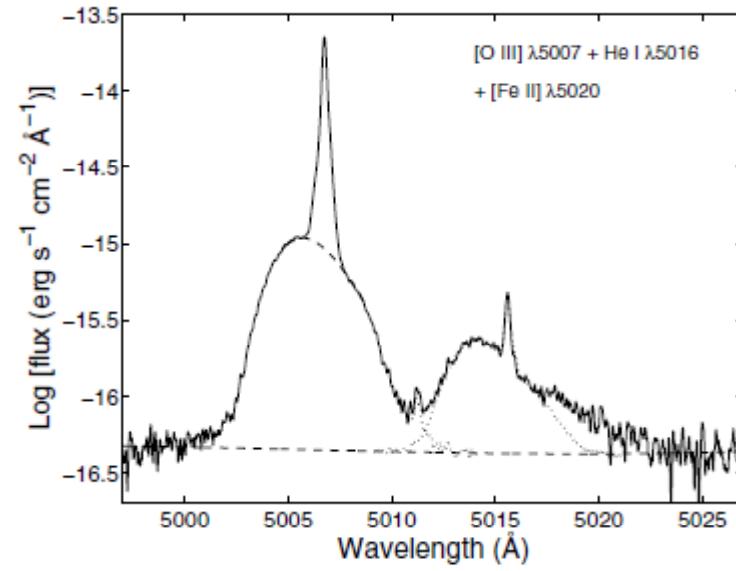

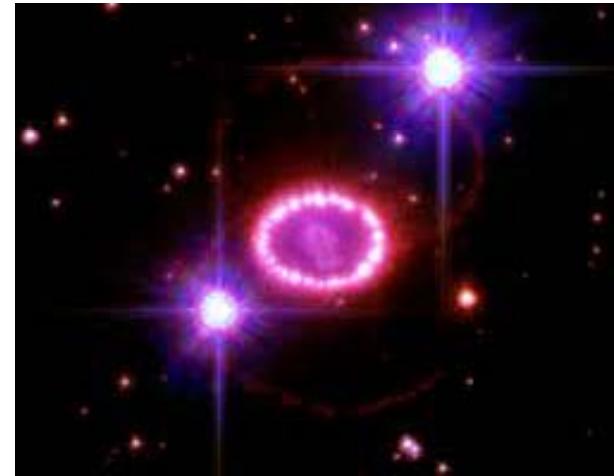

Miceli (2009)

Dopita & Sutherland (2004)

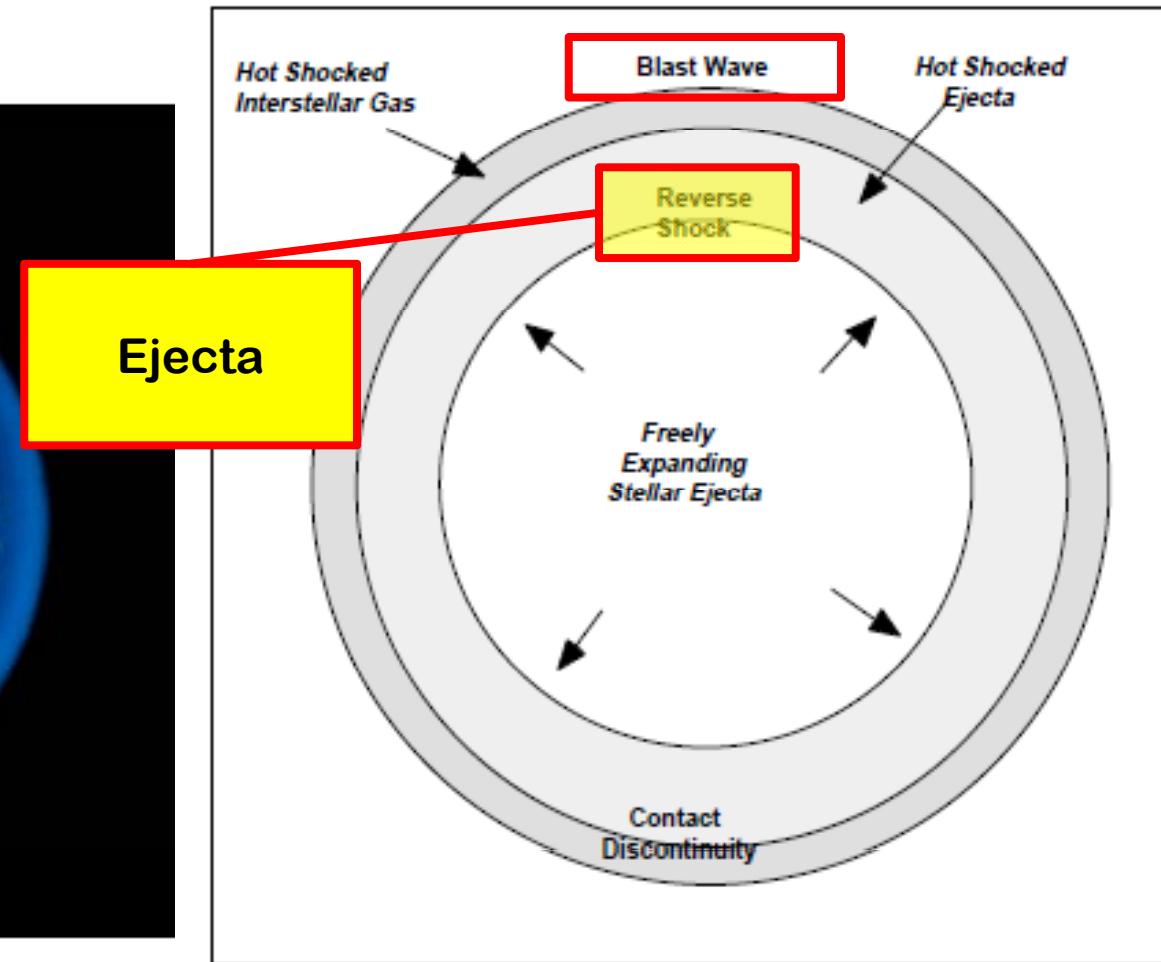

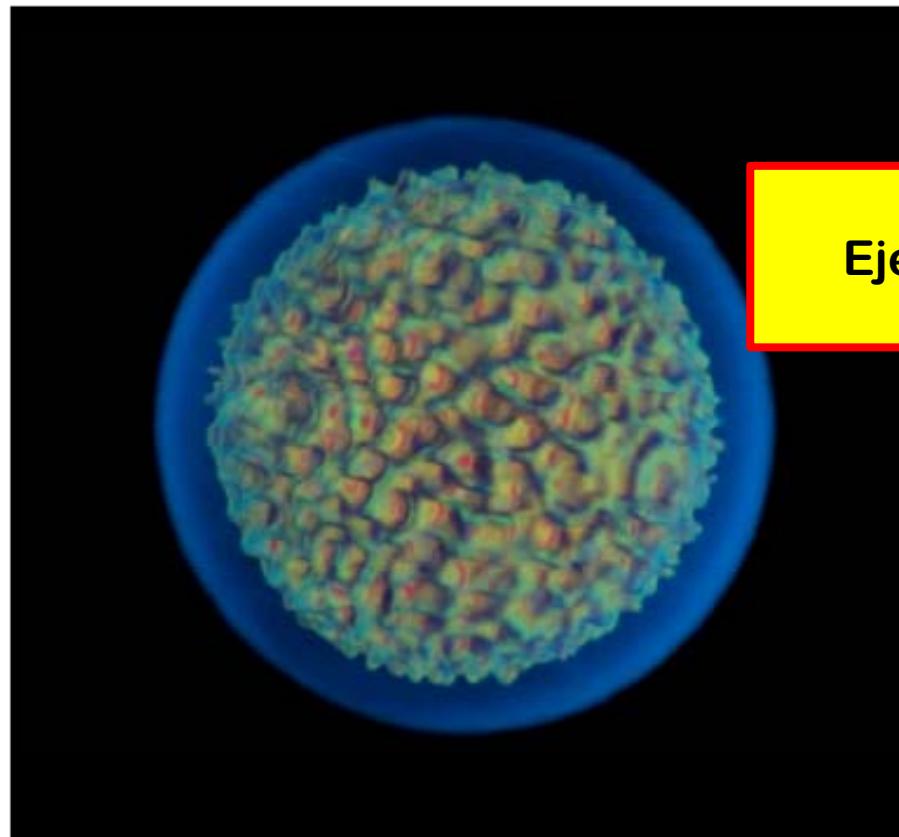

SNRs – CSM; SN 1987A

- VLT/UVES
 - $R \sim 50,000$
- Line width
 - Nebular analysis
 - Narrow: unshocked, 10^3 cm^{-3}
 - Intermediate: the photoionization zone behind the radiative shock, 10^7 cm^{-3}
- Density & structure of CSM

Grönningsson et al. (2008)

SNRs

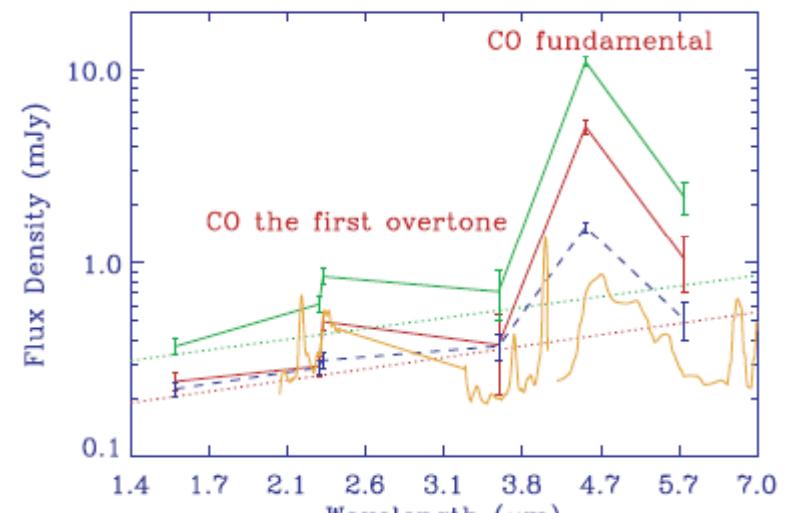

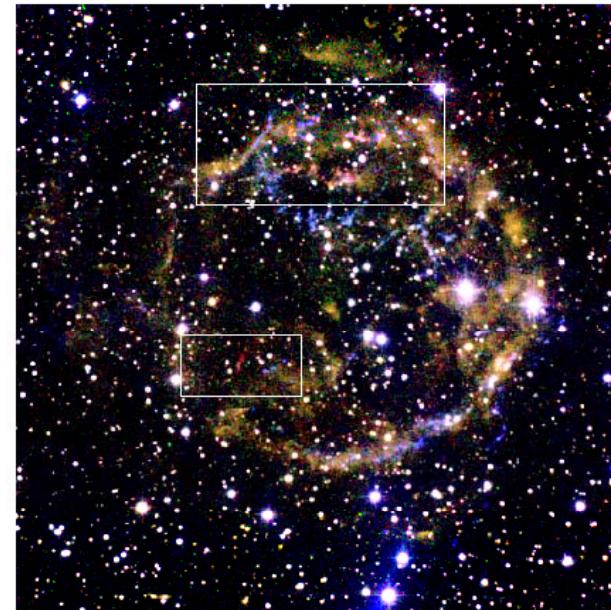

Miceli (2009)

Dopita & Sutherland (2004)

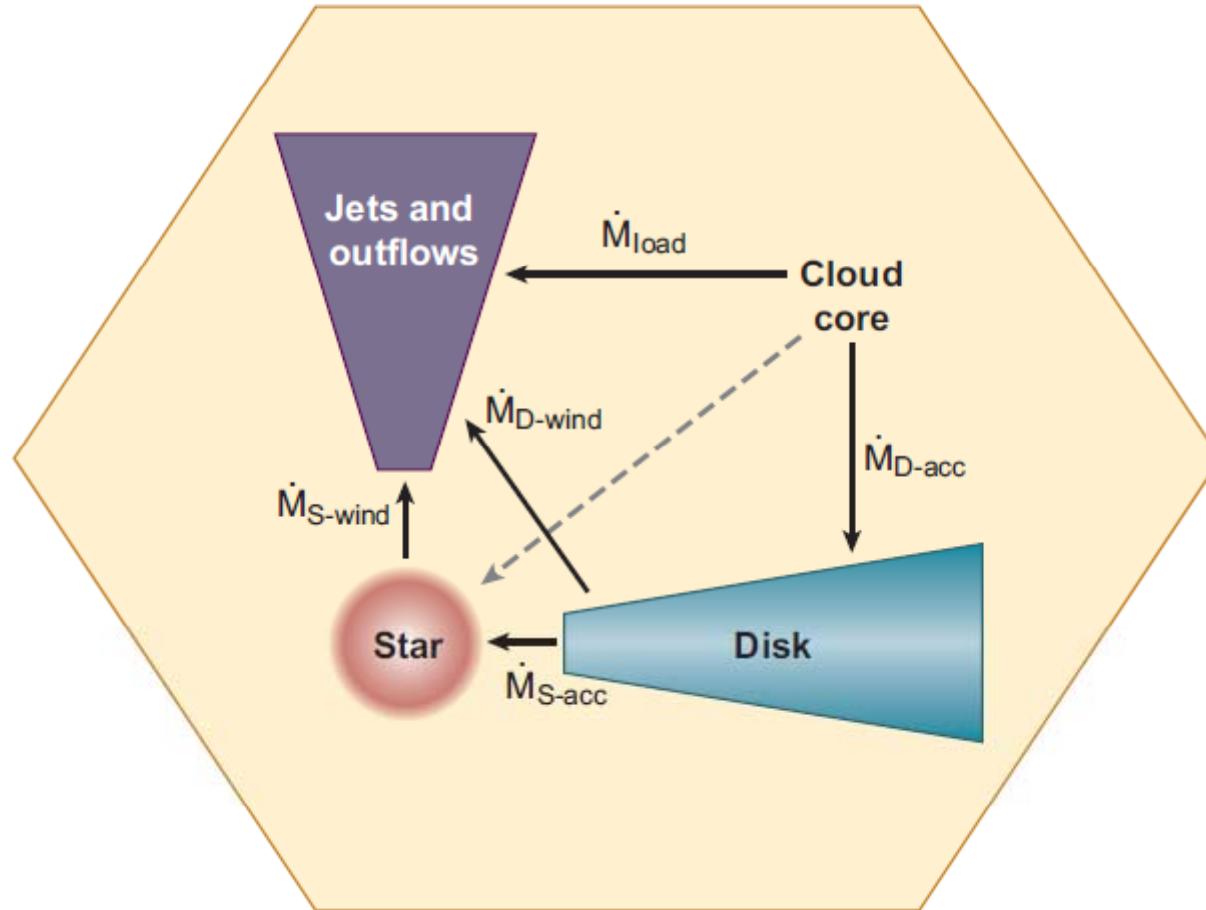

SNRs – Ejecta; Cas A

- Palomar/WIRC
- CO $\nu=1-0$ & $\nu=2-0$
- CO in reverse shock
 - Small molecule mixing in ejecta
 - Astrochemical process & molecule formation last long (~300 yr)

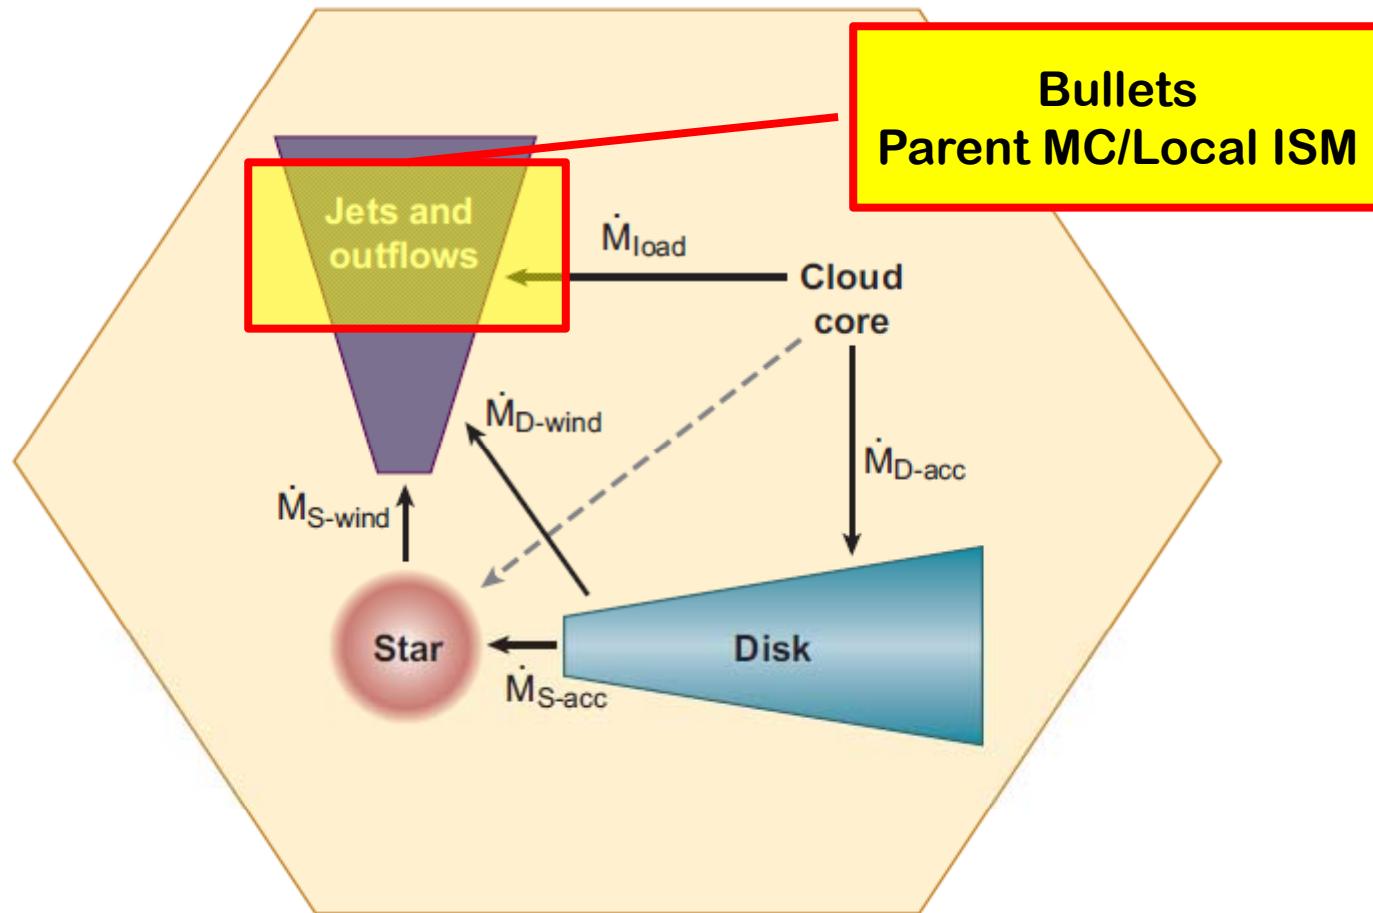

Rho et al. (2009)

Jets/Outflows of YSOs

Zinnecker & Yorke (2007)

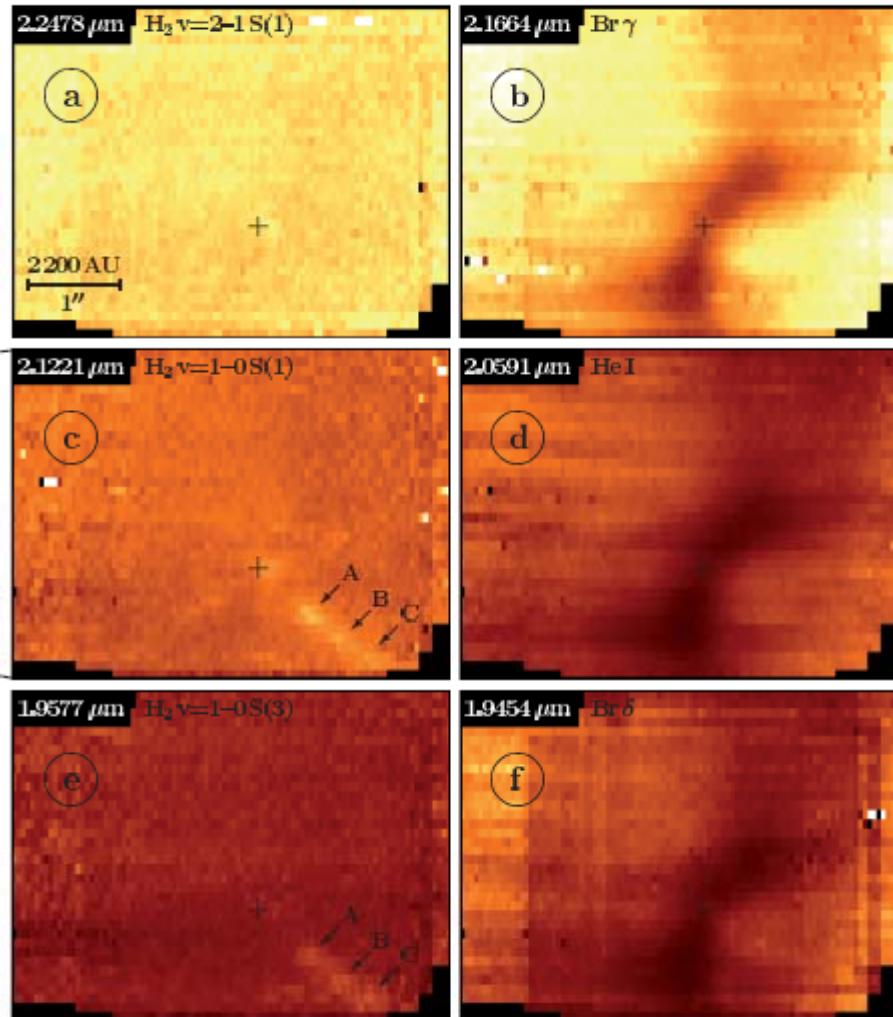

Jets/Outflows of YSOs

Zinnecker & Yorke (2007)

YSOs; M 17 disk

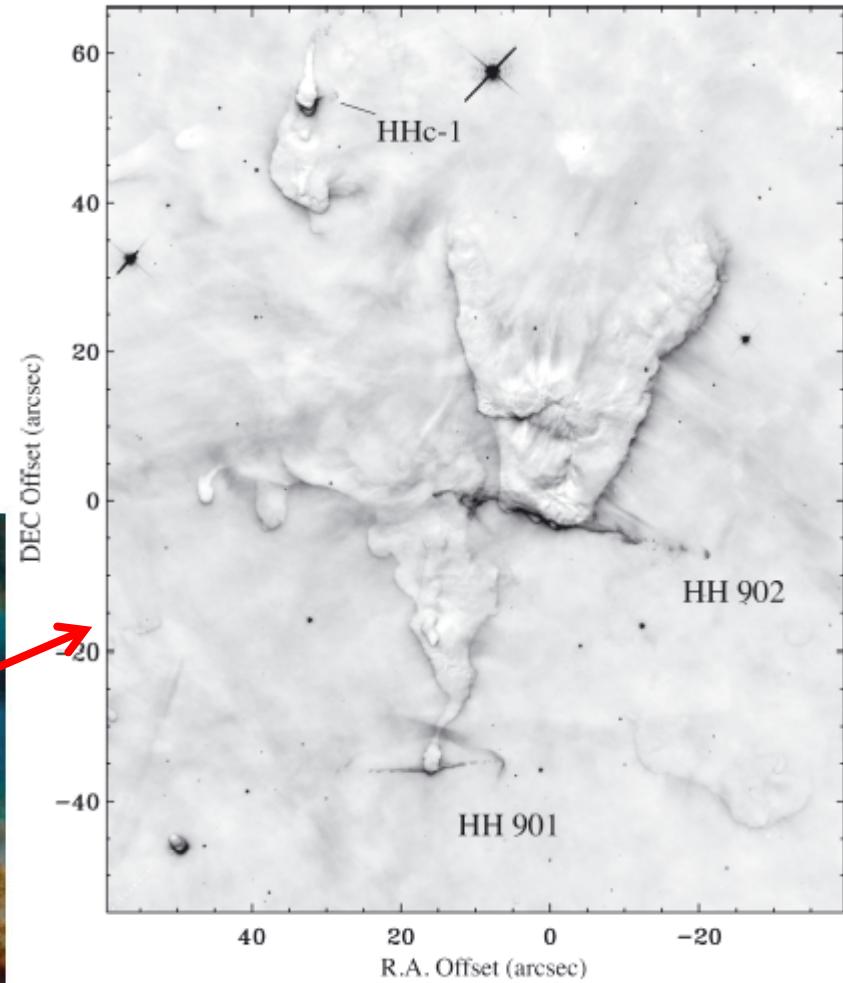

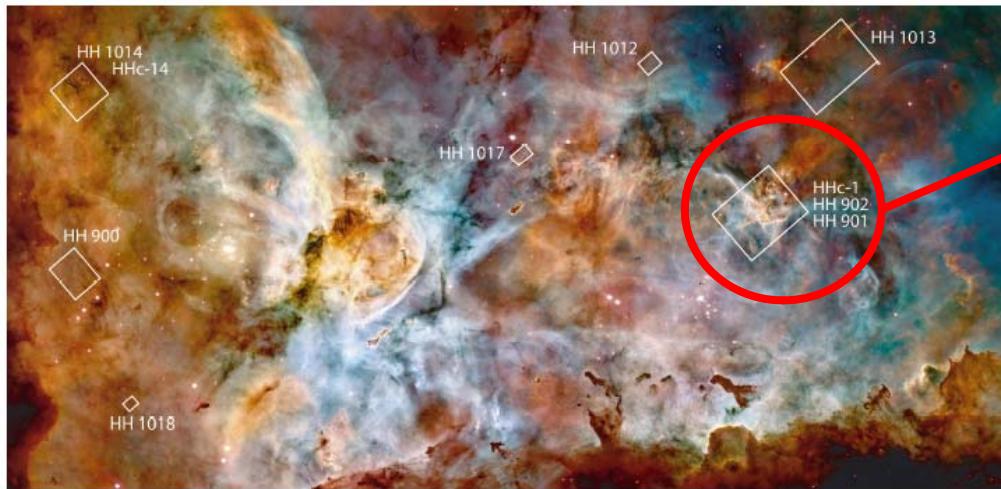

- SINFONI, AO
 - FoV: $4.8'' \times 3.6'' \sim 10560 \text{ AU} \times 7920 \text{ AU}$
- H_2 jet
 - $L(\text{H}_2) \rightarrow dM_{\text{acc}}/dt > 10^{-5} M_{\text{sun}}/\text{yr}$
- Disk silhouette against M 17 H II regions
 - $\text{Br}\gamma, \text{Br}\delta, \text{He I}$

Nurnberger et al. (2007)

HH objects in Carina Nebula

- HST-ACS/WFC, H α
 - R~0.1"
- New HH objects
 - 21 + 17 candidates
 - D<0.01 pc; Active SF

Smith et al. (2010)

What can we do with GMT?

- Higher sensitivity (V & IR)
 - Attack **obscured** regions
- Higher imaging resolution (IR)
 - Attack **complex** regions
- Higher spectral resolution (IR)
 - Attack **small kinematic variations**

What can we do with GMT?

- Higher sensitivity (V & IR)
 - Attack **obscured** regions
 - e.g. Massive SF, Larger sample
- Higher imaging resolution (IR)
 - Attack **complex** regions
 - e.g. Source Identification (CS/Jet/AccDisk)
- Higher spectral resolution (IR)
 - Attack **small kinematic variations**
 - e.g. Slow shocks
